Grade 8 WRITING Section 1

Writing Topic:

Write an informational paper that examines the topic of how people learn and how they can increase their brain power. Be sure to use information from both sources in your paper.

Do you ever wonder how your brain keeps a track of all your thoughts? Do you think about how your brain retains information? Have you ever wanted to know if a great nightsleep helps your brain function properly? Brains are spectacular machines; crafted to store wisdom. They help you learn new, exciting things, they assist you with remembering your favorite memories, and brains can do all these things even better if you do what you need to do.

To begin with, learning is one of the many important strategies that your brain deals with on a daily basis. Brains never stop transforming. They will keep changing for the rest of your life. As stated in the article, "Learning occurs when new knowledge is gained through instruction or experience." To learn new material, you need wisdom and experience, but there is still one more thing that

will send your brain soaring. Imagination is a key concept to learning. Without it you will never reach the "full capacity of learning.

Frankly, memory is another step in learning. From "Changing Your Mind- One Thought at a Time", "Think of the human brain as a vast library. Instead of shelf after shelf of books, this library is full of memories." Since brains are always changing the brain's libraries are transformed to. They are rearranged, so we can access our important thoughts quicker and easier. Memory helps us remember all the things we have learned. It is, is the key to understanding different concepts. Without, in memory we do not retain the information that is necessary to help us learn.

Lastly, increasing brain function is a surprisingly easy thing to do. One of the main steps of increasing brain power is exercise. It has been scientifically proven that people who exercise before completing a task have a higher success rate. Another step is getting a good night sleep. People who sleep for

the required amount of time for their age. function better the next day than someone who didn't sleep well. The last step in improving brain function is positive feedback. If you tell yourself that you can do it then it motivates your brain to help you do it. Increasing brain power will help you have a better lifestyle.

In conclusion, brains help you learn new things, they assist you with reminiscing, and they can upgrade their performance with a little help from you. Learning is the most important thing your brain does. Memory is a step that helps complete the experience of learning. Increasing brain function can be done with three simple objectives. Could you do that?

S & P Score Point: 4

Rich variety of sentence structure, type, and length.
Few fragments or run-ons.
Appropriate paragraphing.

Grade 8 WRITING Section 1

Writing Topic:

Write an informational paper that examines the topic of how people learn and how they can increase their brain power. Be sure to use information from both sources in your paper.

Your brain can do outstanding things, things that you would never think it could do. Our brains are designed to make decisions, accomplish task, and do the unthinkable. Even scientist make observations almost everyday to find out what we are capable of.

Do you remember what time you got up this morning? What about what you ate for breakfest. See this is the difference between short-term memory and long-term memory. You most likely forgot what time you got up this morning because you didn't find it important. You

probally remmember what you had for breakfest though. But in about five to ten days this will become a short-term memory, because it will most likely become useless information. Humans have approximately 70,000 thoughts in just one day. But what are all these thoughts? Believe it or not they are just the same thoughts looping through your mind. It is amazing how much information we can store in our brain.

Humans make decisions in everyday life. It can go from little decisions such as, choosing what you want to wear that day. To big decisions such as, what you're going write on your exam for school. The choices that you make are all decided with the help of your brain.

Whether you choose to exercise or

sleep, your are still helping your brain. Remember to always stay positive and have a wonderful imagination. Like Einstein said "Imagination is more important than knowledge. Knowledge is limited."

S & P Score Point: 3

Variety of sentence structure, type and length.
Evidence of paragraphing.

Grade 8 WRITING Section 1

Writing Topic:

Write an informational paper that examines the topic of how people learn and how they can increase their brain power. Be sure to use information from both sources in your paper.

The Brain for many years has been the topic people bring up.

Your brain is always changing day by day even hour by hour. wheater its good or bad you learn Something new everyday!

learning is gained people say through experience and also through instructions as Albert Elinsten said "Imagination is more important then knowledge" And what i think he is Saying is yes it is good to be smart but stressing your Self on what test your taking next, you have to let loose and have fun and dream about pigs flying on an air plane or cats and dogs talking, It all starts with imagination.

people run test on how the brain works. like does sleep effect your mental Function

and it does! people who get less then 8 hours of sleep can't function the next day. But the brain is the most ineresting thing i've studyed, the brain can hold up to 70,000 thoughts per day thats alot of thoughts!

learning how to excrise you mind is a step everyone should take. But you have to work for it. So do you have what it takes to get smarter? It all starts with you, all you have to do is believe in youself and it will come true.

S & P Score Point: 2

Several fragments and run-ons.

Sleep how is it imporent will it's imporent by
becaues it help's you learn more, Studites show that
if you get eniff sleep it's help's you stay more
foucas on the subject that your being taught. What
are some other way's to increase our brain power Some
scientists say by geting eniff exerise it help's increase
our brain's power and helps you stay foucased, and vusial
and active. Sometimes by acting out what your taught,
it help's remember ~~that~~ spacifice thought and increase
knowledge and is helpful when remembering that subject.
While seeing what your taught it is more Helpful and
is most sucssiesful and is more used then any other method
useing techer's they tech they give use the knowlege
we have come to know they are what's increaseing our
brain power. with but them who would show us that
2+2=4, sure there are other way but it's techers that
