AMERICAN INSTITUTES FOR RESEARCH

Highlights From the 2003 Oklahoma State Assessment of Adult Literacy was prepared by the American Institutes for Research under funding from the State of Oklahoma. The National Center for Education Statistics (NCES) supported the design of the assessment. Sampling and data collection were conducted by Westat. Design and layout of the report was executed by Heather Block and Sanjay Seth and editorial support was provided by Holly Baker. Additional assistance in preparing the report was provided by Rachel Greenberg.

The authors wish to thank all those who contributed to this report. Special thanks go to Dr. Mark Kutner, who provided valuable input at critical stages of the project, Dr. Stéphane Baldi, who served as the project's Technical Advisor, and to Dr. Sheida White of the National Center for Education Statistics (NCES), the Project Officer for the 2003 National Assessment of Adult Literacy (NAAL).

Introduction

This report summarizes key findings from the 2003 Oklahoma State Assessment of Adult Literacy (SAAL). Administered in Oklahoma in 2003 and early 2004, the assessment measures the prose, document, and quantitative literacy of Oklahoma's adults. The Oklahoma SAAL was conducted in conjunction with the National Assessment of Adult Literacy (NAAL), a national literacy assessment sponsored by the National Center for Education Statistics of the United States Department of Education.

This introduction provides an overview of the 2003 Oklahoma SAAL, including the relationship between NAAL and SAAL, the definition of literacy used by SAAL and NAAL, a description of the literacy levels used in the report, and the design of the SAAL assessment. The following section compares the literacy of adults in Oklahoma with the literacy of adults in the nation across six important background characteristics: gender, race/ethnicity, age, language spoken before starting school, educational attainment, and employment status. A subsequent Oklahoma SAAL report will explore the literacy of Oklahoma's adults across workplace, family, and community settings, as well as health literacy.

Relationship Between NAAL and SAAL

The National Assessment of Adult Literacy (NAAL) measures the English literacy of America's adults for the first time since the 1992 National Adult Literacy Survey. The NAAL was administered to a representative sample of adults age 16 and older residing in households or prisons in 2003 and early 2004. Prior to the administration of the NAAL, all states were invited to participate in the 2003 State Assessment of Adult Literacy (SAAL). Just as the NAAL was designed to provide literacy estimates of the national population, the SAAL was designed to provide literacy estimates of state populations.

Oklahoma, along with Kentucky, Maryland, Massachusetts, Missouri, and New York, elected to participate in the 2003 SAAL. A sample of Oklahoma adults was select-

ed for the Oklahoma literacy assessment, which was administered concurrently with the national assessment.¹ Oklahoma adults selected for the SAAL took the same assessment as adults selected for the national sample (described below). The sole difference between the NAAL and the Oklahoma SAAL was that the Oklahoma sample was limited to adults residing in households, while the NAAL sampled adults in households or prisons. To allow appropriate comparisons between Oklahoma and the nation, the national literacy results presented in this report are based only on the national household sample.²

Although the NAAL is representative of the U.S. population and many population groups within the nation, it is not designed to provide state-level estimates of literacy. Only Oklahoma and the other five states that participated in the SAAL have literacy data that are representative of the adults in their states. These data provide a powerful tool for assessing the current literacy of Oklahoma's adults, as well as for making comparisons between Oklahoma and the nation.

Defining Literacy

The NAAL and SAAL define literacy as "using printed and written information to function in society, to achieve one's goals, and to develop one's knowledge and potential." Results are reported on three literacy scales (see table 1 for details):

- **Prose Literacy:** The knowledge and skills needed to perform prose tasks (i.e., to search, comprehend, and use information from continuous texts). Prose examples include editorials, news stories, brochures, and instructional materials.
- **Document Literacy:** The knowledge and skills needed to perform document tasks (i.e., to search, comprehend,

and use information from noncontinuous texts in various formats). Document examples include job applications, payroll forms, transportation schedules, maps, tables, and drug and food labels.

- **Quantitative Literacy:** The knowledge and skills required to perform quantitative literacy tasks (i.e., to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials). Examples include balancing a checkbook, figuring out a tip, completing an order form, or determining from an advertisement the amount of interest on a loan.

Description of Literacy Levels

Literacy scores from the NAAL and SAAL are reported in two formats: (1) as averages and (2) as the percentage of adults within different literacy levels. The literacy levels divide adults into different groups on the basis of their performance on the assessment, providing a context for interpreting the literacy scores.

The National Center for Education Statistics (NCES) asked the National Research Council's Board on Testing and Assessment (BOTA) to recommend a set of literacy levels for the national assessment. The state assessments use the same literacy levels as the national study. Drawing on recommendations from BOTA's Committee on Performance Levels for Adults, NCES decided to report the assessment results using four literacy levels. Descriptions of the abilities associated with each level and the types of tasks that adults in the levels could complete are presented in table 1.

Assessment Design

Unlike indirect measures of literacy, which rely on self-reports or educational attainment, the NAAL and the SAAL measure literacy by asking respondents to demonstrate that they understand the meaning of information found in texts they are asked to read. The literacy tasks in the assessments were drawn from actual texts and documents, which were either used in their original format or reproduced in the assessment booklets. Each question appeared before the

¹ Adults from Oklahoma who were selected as part of the NAAL sample were added to the Oklahoma SAAL sample to increase the power of the analyses, resulting in a total sample size of 1,275 Oklahoma adults.

² Thus, the national results presented in this report are slightly different from the national results presented in the NAAL reports, which include both the household and prison samples.

Table 1 Overview of the literacy levels

Level and definition	Key abilities associated with level	Sample tasks typical of level
<p>Below Basic indicates no more than the most simple and concrete literacy skills.</p> <p>Score ranges for <i>Below Basic</i>: Prose: 0–209 Document: 0–204 Quantitative: 0–234</p>	<ul style="list-style-type: none"> ■ locating easily identifiable information in short, commonplace prose texts ■ locating easily identifiable information and following written instructions in simple documents (e.g., charts or forms) ■ locating numbers and using them to perform simple quantitative operations (primarily addition) when the mathematical information is very concrete and familiar 	<ul style="list-style-type: none"> ■ searching a short, simple text to find out what a patient is allowed to drink before a medical test ■ signing a form ■ adding the amounts on a bank deposit slip
<p>Basic indicates skills necessary to perform simple and everyday literacy activities.</p> <p>Score ranges for <i>Basic</i>: Prose: 210–264 Document: 205–249 Quantitative: 235–289</p>	<ul style="list-style-type: none"> ■ reading and understanding information in short, commonplace prose texts ■ reading and understanding information in simple documents ■ locating easily identifiable quantitative information and using it to solve simple, one-step problems when the arithmetic operation is specified or easily inferred 	<ul style="list-style-type: none"> ■ finding in a pamphlet for prospective jurors an explanation of how people were selected for the jury pool ■ using a television guide to find out what programs are on at a specific time ■ comparing the ticket prices for two events
<p>Intermediate indicates skills necessary to perform moderately challenging literacy activities.</p> <p>Score ranges for <i>Intermediate</i>: Prose: 265–339 Document: 250–334 Quantitative: 290–349</p>	<ul style="list-style-type: none"> ■ reading and understanding moderately dense, less commonplace prose texts as well as summarizing, making simple inferences, determining cause and effect, and recognizing the author's purpose ■ locating information in dense, complex documents and making simple inferences about the information ■ locating less familiar quantitative information and using it to solve problems when the arithmetic operation is not specified or easily inferred 	<ul style="list-style-type: none"> ■ consulting reference materials to determine which foods contain a particular vitamin ■ identifying a specific location on a map ■ calculating the total cost of ordering specific office supplies from a catalog
<p>Proficient indicates skills necessary to perform more complex and challenging literacy activities.</p> <p>Score ranges for <i>Proficient</i>: Prose: 340–500 Document: 335–500 Quantitative: 350–500</p>	<ul style="list-style-type: none"> ■ reading lengthy, complex, abstract prose texts as well as synthesizing information and making complex inferences ■ integrating, synthesizing, and analyzing multiple pieces of information located in complex documents ■ locating more abstract quantitative information and using it to solve multistep problems when the arithmetic operations are not easily inferred and the problems are more complex 	<ul style="list-style-type: none"> ■ comparing viewpoints in two editorials ■ interpreting a table about blood pressure, age, and physical activity ■ computing and comparing the cost per ounce of food items

NOTE: Adults at the *Below Basic* level range from being unable to read and understand any written information in English to having the abilities listed and typically succeeding at the types of tasks listed. For each of the other levels, the abilities and tasks listed are typical of adults at that level. Although the literacy levels share common names with the NAEP levels, they do not correspond to the NAEP levels.

Washington, DC: National Academies Press; White, S. and Dillow, S. (2005). *Key Concepts and Features of the 2003 National Assessment of Adult Literacy* (NCES 2006-471). U.S. Department of Education. Washington, DC: National Center for Education Statistics.

materials needed to answer it, thus encouraging respondents to read with purpose.

Respondents could correctly answer many assessment questions by skimming the text or document for the information necessary to perform a given literacy task. All tasks were open-ended, and respondents wrote their answers directly in their assessment booklets.

A total of 152 prose, document, and quantitative literacy tasks were included in the NAAL and SAAL assessments. Asking each respondent to complete all the tasks would have been too time-consuming and tiring, so the tasks were organized into 13 unique blocks of tasks. Each block included approximately 11 literacy tasks distributed across the prose, document, and quantitative scales. Respondents were asked to complete an assessment booklet that included seven literacy screening tasks common to all booklets, followed by three blocks of tasks. Respondents who completed the assessment attempted approximately 40 literacy tasks in about 50 minutes.

Interpreting Results

The average scores and percentages presented in this report are estimates based on a sample of Oklahoma's adults. Like all samples, the results are subject to a measure of uncertainty

(i.e., sampling error), reflected in the standard errors of the estimates. Also reflected in the standard errors are errors of measurement associated with the imprecision of the literacy assessment. Standard errors for the prose, document, and quantitative scale scores and the percentage of adults in each literacy level are presented in Appendix C.

The discussion of results in the following section takes into account the standard errors associated with the estimates. All differences discussed in this report, whether between Oklahoma and the nation or between members of a population group (e.g. men and women), are statistically significant at the .05 level. This means that observed differences between groups are unlikely to be due to chance factors associated with sampling variability. Hence, the term "significant" does not reflect any judgment about the absolute magnitude of differences.

Statistically significant differences between Oklahoma's adults and adults in the nation are noted in the tables and figures in this report. Differences between population groups are not identified in the tables or figures, but are discussed in the text. Although average scores are presented for each population group, space limitations prevented displaying results by literacy levels for all three scales. Full results for all literacy scales, with estimates and standard errors, can be found in Appendix C.

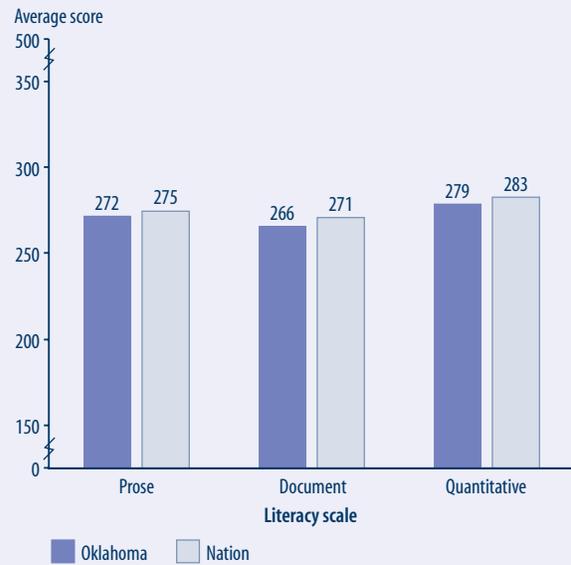

Adult Literacy in Oklahoma and the Nation, 2003

This section examines the relationship between important demographic characteristics, including education and employment, and literacy. Specifically, the analyses compare the literacy of adults in Oklahoma and the nation across different demographic groups, providing a glimpse of the state's relative performance on prose, document, and quantitative literacy.

Adult Literacy in Oklahoma Similar to Adult Literacy in the Nation

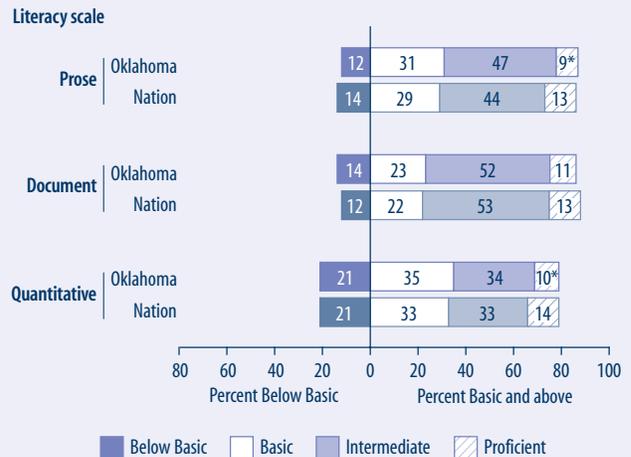

The average prose, document, and quantitative literacy of adults in Oklahoma did not differ significantly from the average literacy of adults in the nation. The percentage of adults in Oklahoma with *Below Basic* prose, document, and quantitative literacy was also similar to that in the nation, though a smaller percentage of Oklahoma's adults had *Proficient* prose and quantitative literacy compared with the nation's adults.

* Significantly different from the nation.

Note: Percentages may not add to 100 because of rounding.

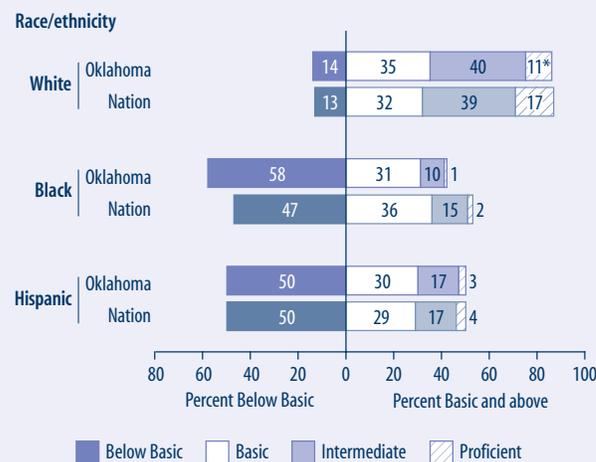

Source: 2003 State Assessment of Adult Literacy and 2003 National Assessment of Adult Literacy.

Average Literacy of Whites in Oklahoma Lower Than Literacy of Whites in the Nation

The average literacy of Whites in Oklahoma was significantly lower than the average literacy of Whites in the nation, though differences in the literacy of Blacks and Hispanics in Oklahoma and Blacks and Hispanics in the nation were not significant. The percentage of Whites in Oklahoma with *Proficient* prose, document, and quantitative literacy was also lower than the percentage of similar Whites in the nation.

Similar to in the nation, the average literacy of Whites in Oklahoma was significantly higher than the average literacy of Blacks and Hispanics in the state. The percentage of Whites with *Below Basic* literacy was also lower than the percentage of Blacks and Hispanics with *Below Basic* literacy. On the quantitative scale, for example, at least half of Blacks and Hispanics in Oklahoma had *Below Basic* literacy. Unlike the nation, where the average prose and document literacy of Blacks was higher than that of Hispanics, differences

between Blacks and Hispanics for prose and document literacy in Oklahoma were not significant.

* Significantly different from the nation.

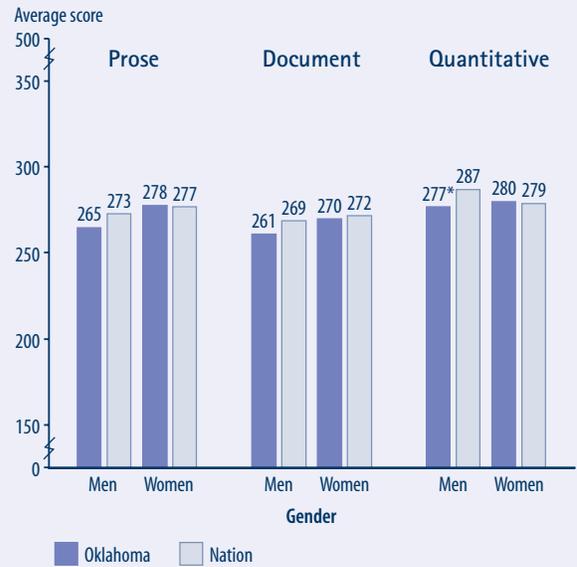

Source: 2003 State Assessment of Adult Literacy and 2003 National Assessment of Adult Literacy.

Average Prose and Document Literacy of Men and Women in Oklahoma Similar to the Nation

The average prose, document, and quantitative literacy of women in Oklahoma did not differ significantly from the average literacy of women in the nation. The average prose and document literacy of men in Oklahoma was also comparable to that in the nation, though the average quantitative literacy of men in the state was significantly lower than the average quantitative literacy of men in the nation.

Similar to in the nation, the average prose literacy of women in Oklahoma was higher than the average prose literacy of men. The percentage of men in Oklahoma with *Below Basic* prose literacy was also 7 percentage points higher than the percentage of women. Unlike in the nation, however, differences between men and women in Oklahoma in average quantitative literacy were not significant.

Note: Percentages may not add to 100 because of rounding.

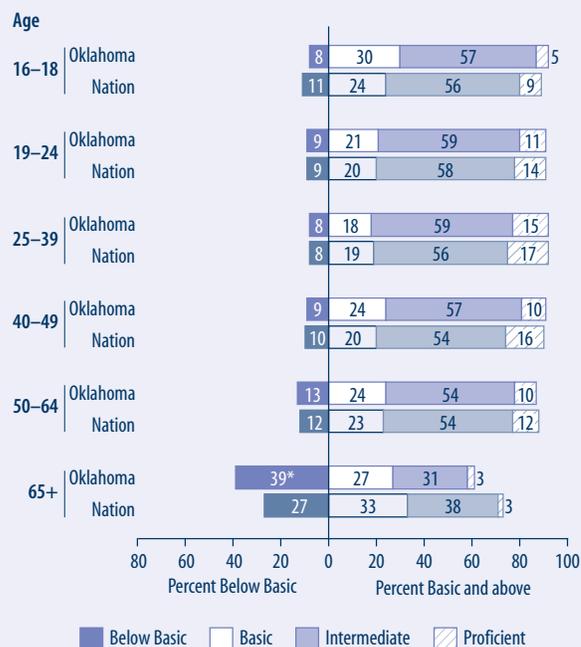

Source: 2003 State Assessment of Adult Literacy and 2003 National Assessment of Adult Literacy.

Average Prose and Document Literacy Lowest in Oklahoma and the Nation for the Oldest Adults

The average prose, document, and quantitative literacy of adults in Oklahoma in different age groups did not differ significantly from the literacy of adults in the nation, with one exception: the document literacy of the oldest adults in Oklahoma (age 65 and older) was lower than the average document literacy of adults of the same age in the nation. The percentage of Oklahoma adults age 65 and older with *Below Basic* document literacy was also higher than the percentage in the nation.

The average prose and document literacy of adults age 65 and older was significantly lower than the average literacy of adults in other age groups, though differences in quantitative literacy between the youngest (16 to 18) and oldest adults were not significant. On the document and quantitative scale, approximately 40 percent of adults age 65 and older in Oklahoma had *Below Basic* literacy.

Average Literacy of Adults Who Spoke Only English Before Starting School Lower in Oklahoma Than in the Nation

Adults in Oklahoma who spoke only English before starting school had lower average prose, document, and quantitative literacy than adults in the nation with the same language background. Differences between Oklahoma and the nation for adults from the other language groups (English and another language and non-English) were not significant.

Although lower than the literacy of similar adults in the nation, the average literacy of adults in Oklahoma who spoke only English before starting school was significantly higher than the literacy of adults with a bilingual English background or those who spoke a non-English language before starting school. Across the literacy scales, the percentage of adults in Oklahoma with *Below Basic* literacy who spoke a non-English language before starting school was significantly higher than the percentage of adults with *Below Basic* literacy from the other two language groups. On the prose scale, for example, over half of the adults in

Figure 10. Percentage of adults in Oklahoma and the nation in each prose literacy level, by language spoken before starting school: 2003

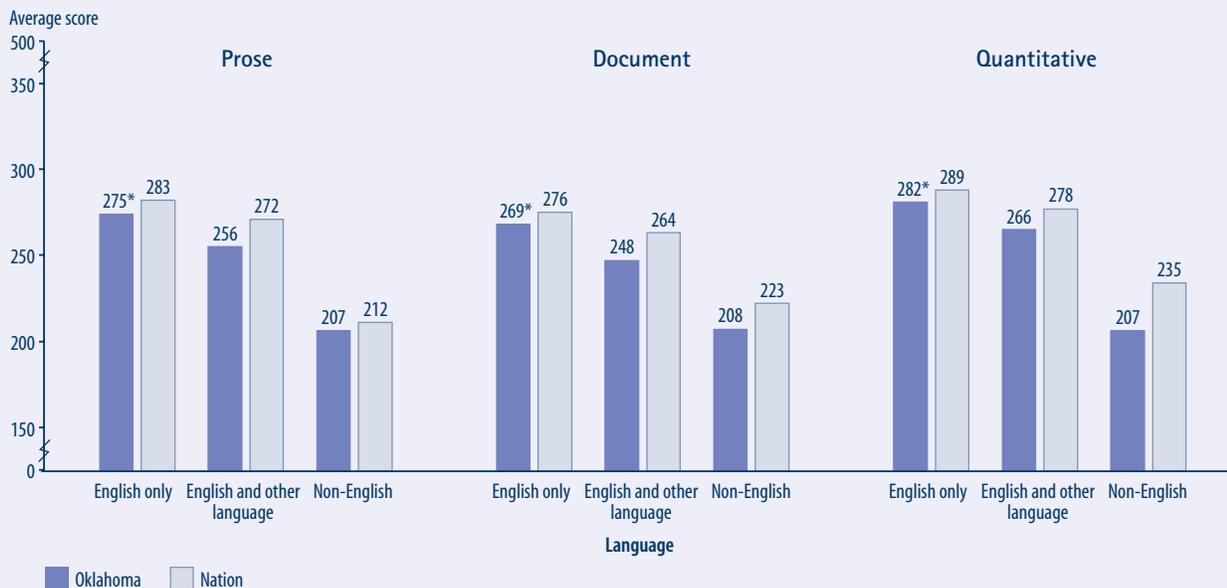

* Significantly different from the nation.

Note: Percentages may not add to 100 because of rounding.

Source: 2003 State Assessment of Adult Literacy and 2003 National Assessment of Adult Literacy.

Oklahoma with a non-English language background had *Below Basic* literacy.

* Significantly different from the nation.

Source: 2003 State Assessment of Adult Literacy and 2003 National Assessment of Adult Literacy.

Average Literacy by Educational Attainment Similar in Oklahoma and the Nation

Adults in Oklahoma and the nation who completed more education had higher average literacy than adults with less education. Across the three scales, literacy was lowest for adults who did not complete high school and highest for adults who graduated college or attended graduate school (differences in average literacy between college graduates and adults who attended graduate school were not significant).

Although average literacy was lowest for adults who did not graduate high school, the percentage of these adults with *Below Basic* prose literacy in Oklahoma was significantly lower than the percentage in the nation. The percentage of adults with *Below Basic* prose, document, and quantitative literacy who did not graduate high school was still higher than that of adults with any other level of educational attainment, however. On the quantitative scale, for example, more than 60 percent of adults in Oklahoma and the nation who did not graduate high school had *Below Basic* literacy.

Table 1. Average prose, document, and quantitative literacy of adults in Oklahoma and the nation, by educational attainment: 2003

Source: 2003 State Assessment of Adult Literacy and 2003 National Assessment of Adult Literacy.

Average Literacy in Oklahoma Highest for Adults Employed Full or Part Time

The average literacy of adults in Oklahoma who were employed full or part time was significantly higher than the average literacy of adults who were not in the labor force or unemployed (differences between adults employed full and part time were not significant). On the quantitative scale, for example, average scores for adults who were not in the labor force were more than 30 points lower than average scores for adults who were employed full time. Across the four categories of employment status, the average literacy of Oklahoma's adults was similar to the average literacy of the nation's adults.

Among adults in Oklahoma with *Below Basic* prose, document, and quantitative literacy, more than half were not in the labor force. Similar to adults in the nation, the majority of adults with *Proficient* literacy were employed full time.

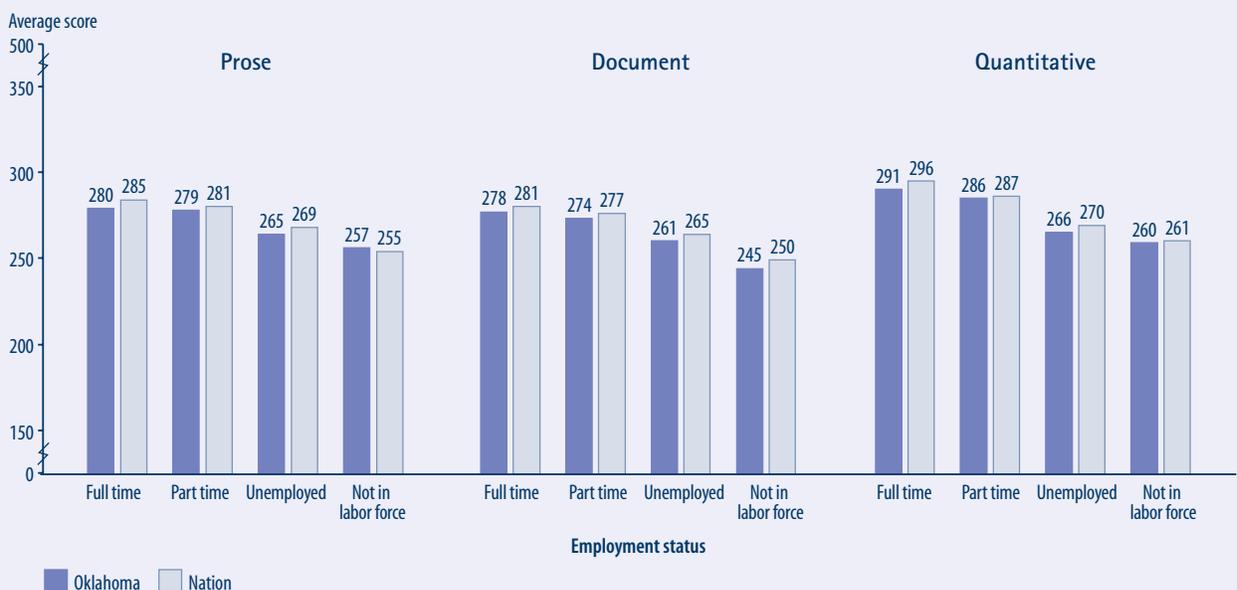

Figure 12. Percentage of adults in Oklahoma and the nation in each employment category, by prose literacy level: 2003

Note: Percentages may not add to 100 because of rounding.

Appendix A: Technical Notes

This section provides an overview of key technical aspects of the Oklahoma SAAL, including sample size and data collection procedures, statistical testing, and the definition of variables used in this report. Further information about the design, administration, and analysis of the NAAL and SAAL can be found in the forthcoming *2003 National Assessment of Adult Literacy Technical Report*.¹

Sample Size and Data Collection Procedures

As noted in the Introduction, the Oklahoma State Assessment of Adult Literacy (SAAL) was administered concurrently with the National Assessment of Adult Literacy (NAAL). The 2003 NAAL was administered to a nationally representative sample of 19,714 adults ages 16 and older residing in households or prisons. In Oklahoma, 1,553 adults residing in households were originally sampled to participate in the Oklahoma SAAL. Valid assessment data were collected from 1,274 adults. This sample includes adults in the national NAAL sample, as well as adults selected specifically for the Oklahoma SAAL sample. Adults in Oklahoma who were selected as part of the NAAL sample were added to the Oklahoma SAAL sample to increase the power of the analyses. Data collection was conducted between May 2003 and February 2004.

The final household sample response rate for the NAAL and SAAL was 62 percent. The National Center for Education Statistics (NCES), which sponsored the NAAL, requires a nonresponse bias analysis when the unit response rate for a sample is less than 85 percent. The nonresponse bias analysis revealed differences in the background characteristics of respondents who participated in the assessment compared with those who refused. A nonresponse bias adjustment was performed to reduce the bias due to respondent refusal. The adjustment corrected for the initial nonresponse bias, resulting in negligible bias for the household sample. The analyses presented in this report are based on data from the corrected household sample.

¹ U.S. Department of Education, National Center for Education Statistics. (forthcoming). *2003 National Assessment of Adult Literacy Technical Report*. Washington, DC: U.S. Government Printing Office.

Statistical Testing

All comparisons discussed in this report are **statistical** comparisons based on the t statistic, using a 95 percent confidence interval (two-tailed). The formula used to compute the t statistic was

$$t = \frac{(P_1 - P_2)}{\sqrt{(SE_1^2 + SE_2^2)}}, \text{ where } P_1 \text{ and } P_2 \text{ are the estimates to be compared and } SE_1 \text{ and } SE_2 \text{ are their corresponding standard errors.}$$

Variable Definitions

Age

All respondents were asked to report their birth dates, and this information was used to calculate their age. Age groups reported are 16 to 18, 19 to 24, 25 to 39, 40 to 49, 50 to 64, and 65 and older. Age groups were selected to correspond to key life stages of adults, although stages will vary from person to person:

- 16–18: Completion of secondary education
- 19–24: College or job training
- 25–39: Early career
- 40–49: Mid career
- 50–64: Late career
- 65+: Retirement

Educational Attainment

All respondents were asked to indicate the highest level of education they had completed in the United States. Respondents who went to school outside the United States were probed for the equivalent level of educational attainment. The following options were provided:

- Still in high school
- Less than high school
- Some high school
- GED or high school equivalency
- High school graduate
- Attended a vocational, trade, or business school after high school
- College: less than 2 years
- College: associate's degree (A.A.)
- College: 2 or more years, no degree
- College graduate (B.A. or B.S.)
- Postgraduate, no degree
- Postgraduate degree (M.S., M.A., Ph.D., M.D., etc.)

Respondents who reported less than high school or some high school were asked how many years of education they completed. For certain analyses, some of these groups were collapsed. For example, respondents who had completed postgraduate stud-

ies but had not received a degree were generally combined with those who had completed a postgraduate degree.

Employment Status

Employment status was coded as one of the following:

- Full time or working two or more part-time jobs
- Part time
- Unemployed, laid off, or looking for work
- Not in the labor force (retired, in school, keeping house, or doing volunteer work)

Language Spoken Before Starting School

All respondents were asked what language or languages they learned to speak before starting school. For the SAAL reports, responses to this question were coded into one of three categories:

- English only
- English and other language
- Non-English language

Race/ethnicity

All respondents were asked two questions about their race and ethnicity. The first question asked them to indicate whether they were Hispanic or Latino. The second question asked them to choose one or more of the following groups to describe themselves:

- White
- Black or African American
- Asian
- American Indian or Alaskan Native
- Native Hawaiian or other Pacific Islander

Individuals who responded "yes" to the first question were coded as Hispanic, regardless of their answer to the second question.

If the respondent was non-Hispanic and indicated only one race, then he or she was grouped as the race indicated. If the respondent was non-Hispanic and indicated multiple races, then he or she was coded as "other/multiracial." For reporting purposes, "Asian" and "Native Hawaiian or other Pacific Islander" were collapsed into one category. There were too few cases in the "other/multiracial" category to reliably estimate their literacy proficiencies.

Sex

Interviewers recorded the sex of each respondent.

Appendix B: Sample Assessment Questions

Respondents who participated in the 2003 Oklahoma Assessment of Adult Literacy and the 2003 National Assessment of Adult Literacy were asked to complete prose, document, and quantitative literacy tasks of varying levels of difficulty. The sample questions on the following pages illustrate the types of tasks used to measure the literacy of America's adults. These questions were originally developed for the 1992 National Adult Literacy Survey and were reused in 2003.

Consistent with the design of the assessment, each sample question appears before the text or document needed to answer the question. The percentage of respondents who answered the questions correctly is reported, as well as the percentage of correct responses for each of the four literacy assessment levels.

More information about the sample assessment questions can be found on the Internet at <http://nces.ed.gov/naal>.

Prose Literacy Question

Refer to the article on the next page to answer the following question.

According to the brochure, why is it difficult for people to know if they have high blood pressure?

Correct answer

Any statement such as the following:

Symptoms are not usually present

High blood pressure is silent

Percentage of adults who answered the question correctly, 2003

TOO MANY BLACK ADULTS DIE FROM THE EFFECTS OF HIGH BLOOD PRESSURE

DID YOU KNOW?

More than one out of every four Black adults has high blood pressure, according to a two-year survey by Public Health Service in the 1960's. Other studies show as many as one out of three Black adults has high blood pressure.

High blood pressure is the most common chronic disease treated by practitioners in the Black community.

More Black people die as a result of high blood pressure than any other disease.

For every Black person who dies of sickle-cell anemia, at least 100 others die from the effects of high blood pressure.

The rate of death from the effects of high blood pressure for Black people is nearly one and one-half times the rate for White people.

High blood pressure, along with cigarette smoking, contributes greatly to the apparent increased number of heart attacks among Black adults.

If high blood pressure is controlled, strokes, heart attacks and kidney disease can be substantially reduced.

YES, HIGH BLOOD PRESSURE CAN BE TREATED... AND CONTROLLED.

WHAT YOU CAN DO

Have your blood pressure checked regularly

Unfortunately, high blood pressure is a silent killer andcrippler. At least half of the people who have high blood pressure don't know it because symptoms usually are not present. The only way you can be sure is to have the doctor check your blood pressure. You should have your blood pressure checked at least once a year, especially if: (1) you are Black, (2) if you are over 40, (3) if members of your family or close relatives have had high blood pressure or the complications of high blood pressure (stroke, heart attack, or kidney disease), or (4) if you have frequent headaches, dizziness, or other symptoms that may occasionally be related to high blood pressure.

Follow your doctor's instructions

High blood pressure can't be cured, but it can be kept under control. Control means keeping your blood pressure as close to normal as possible. That's very important to you — it can prevent a crippling stroke or other serious illness in the future.

The doctor will find a way to control your blood pressure that's most comfortable for you. Then it will be up to you — to take the medicine and follow the prescribed diet, to follow the instructions carefully and to come back regularly for checkups.

Yes, high blood pressure can be controlled, but only if *you* cooperate fully with your doctor.

Prose Literacy Question

Refer to the article on the next page to answer the following question.

What is the purpose of the *Se Habla Español* expo?

Correct answer

Any statement such as the following:

- To enable people to better serve and sell to the Hispanic community
- To improve marketing strategies to the Hispanic community
- To enable people to establish contacts to serve the Hispanic community

Percentage of adults who answered the question correctly, 2003

MARKETING

Se Habla Español Hits Chicago

September 25, 26, and 27 are three days that will change your marketing.

"To some advertisers, the Hispanic market's like the weather—you hear a lot about it, but you can't do much about it," says veteran marketer Tony Martinez. "And other companies think Hispanics will buy their products anyway, so they don't need to do anything special.

"Both attitudes are way off base," Mr. Martinez says briskly, "and they'll both make the competition ecstatic. Because there's a lot of money to be made in the Hispanic market. Its spending power will be \$160 billion this year, and that's growing maybe \$1.4 billion a month," he exclaims, peering intensely over his glasses. "For example, we Hispanics buy 9 percent of all new automobiles.

"This is definitely a special market...you do have to have a special understanding of it," Mr. Martinez goes on, "because as one research firm said, it's 'a market with currents that are going in many directions.' But the rewards will be fantastic. Hispanics are very brand conscious and they tend to become brand loyal very quickly."

It's Mr. Martinez's job—his mission in life—to make sure companies learn how they can serve and sell to America's Hispanics. He has been marketing to the community for many years, working with the best in the business, including Coca-Cola and the advertising firm of Castor GS&B. Now his staff is organizing the largest annual Hispanic market trade show in the business—*Se Habla Español*.

The three-day *Se Habla Español* expo, put on by HISPANIC BUSINESS magazine, is in Chicago this year, at the Hyatt Regency. As in the two previous years in New York and Los Angeles, this conference will host a "big top"-like mix of activities.

The show draws thousands of the country's top marketers, media people, advertisers, researchers, and Hispanic contractors—all intent on gathering as much information as possible, and all hoping to explore new business opportunities. As in any really good big-top show, a hundred different things are happening all at once.

More than 60 Hispanic market specialists conduct fact-heavy seminars. Companies promoting everything from cars to demographic information to career opportunities for Hispanic professionals display and discuss their products in 30,000 square feet of exhibit space. Major exhibitors this year include Ford Motor Co., Lincoln-Mercury, Chevrolet, American Airlines, Telemundo, the Bureau of the Census, and many, many more.

"It's all contacts . . . contacts . . . contacts!" Mr. Martinez exclaims in his best marketing ringmaster style.

Each of the major media hosts its own luncheon or reception, playing to sold-out crowds. Leading participants in last year's Print Reception, for example, included *La Opinion* of Los Angeles, *Vista* magazine, *The Miami Herald*, and the *Los Angeles*

Times. Some participants in the 1989 Radio Luncheon included Katz Hispanic Radio and Caballero Spanish Media. "We still have a few events open to corporate sponsors," Mr. Martinez mentions, not without interest. "They'll be able to count on considerable media play both in preliminary press coverage and during the events themselves."

Another opportunity for sponsor visibility is the *Se Habla Español* Scholarship Fund, which will publicly award scholarships to talented Hispanic students in the various communications fields.

A grand finale black tie banquet spotlights the leading figures in America's Hispanic media world, recognizing outstanding work in each medium with the *Se Habla Español Awards in Communication*. In 1989, Mr. Martinez recalls, almost 400 entries were submitted. Publicidad Siboney swept the top honors for "Ad of the Year" and "TV Ad of the Year" with its commercial for Pepsi-Cola.

One problem attendees find is that the conference offers more information than any one person can gather during just three days. "They should know their priorities," Mr. Martinez advises, "to ensure they focus on the events that will be of most value to their employers."

Document and Quantitative Literacy Questions

This is an example of a task that was scored in three separate parts and treated as three separate questions. The first two questions were included on the document scale and the third question was included on the quantitative scale.

Refer to the form on the next page to answer the following question.

Use the following information to fill in the receipt for certified mail. Then fill in the “TOTAL Postage and Fees” line.

- You are sending a package to Doris Carter.
- Her address is 19 Main Street, Augusta, GA 30901.
- The postage for the package is \$1.86.
- The fee for certified mail is \$0.75.

Correct answer

Question 1 (Document): Enters name and address correctly. No penalty for misspelling.

Percentage of adults who answered the question correctly, 2003

All Adults		<i>Below Basic</i>		<i>Basic</i>		<i>Intermediate</i>		<i>Proficient</i>

What may be Certified?

Only items of no intrinsic value such as letters, files, records, etc., that are sent Priority First-Class Mail may be sent by certified mail. No insurance coverage is provided against loss or damage for this service. (For valuables and irreplaceable items, you should use insured or registered mail.)

How to use Certified Mail.

Simply fill out Form 3800, *Receipt for Certified Mail*, and attach (to the address side of the mail) the numbered label portion and the required postage and fee. You may obtain these forms at post offices or from rural carriers. Many customers find it convenient and a “time-saver” to have the form completed before approaching the window. Certified mail, with proper postage and fees affixed, may be dropped in a mailbox unless an official dated receipt is required.

Restricted Delivery

If you want to restrict the delivery of certified mail, you must endorse the mail “Restricted Delivery.” This service is available for a \$1.00 fee and can only be used for items addressed to specific individuals by name. However, the addressee can and often does authorize an agent to receive his or her restricted mail.

Fees

The fee for certified mail is 75 cents (in addition to your postage). For an additional fee, you also may purchase a return receipt which provides you proof of delivery.
