SoonerStart Early Intervention Program
Autism Spectrum Disorder (ASD) Screening Results

Child's Name:	Date of Birth:

The above named child was screened and indicated to be at risk for autism spectrum disorder (ASD). One or both screeners below may have been used.

Check all that apply:

____Modified Checklist for Autism in Toddlers Revised (M-CHAT-R; Robins, Fein, & Barton, 2009). The M-CHAT-R is a Level 1 screening tool validated for screening toddlers between 18 and 30 months of age, to assess risk for autism spectrum disorders (ASD). The M-CHAT-R is based on parental report.

____Screening Tool for Autism in Two-Year-Olds (STAT; Stone, Coonrod, & Ousley, 2000). The STAT is a Level 2 interactive screening measure developed to screen for autism in children between 24 and 36 months of age. Level 2 screening tools specific to autism spectrum disorder help to identify children at risk of having ASD rather than other developmental disorders.

Screening tools for autism are not intended to indicate whether or not a child has autism; it only rules in or rules out the possibility of autism. The results of the screening have raised concerns that are consistent with autism spectrum disorder. You may want to discuss these results with your primary health care provider. SoonerStart services are not contingent upon the child having a diagnosis of ASD.
