World-Class Instructional Design and Assessment

# Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ 2.0 Paper English Language Proficiency Test, Series 401, 2016-2017 Administration 

Annual Technical Report No. 13B

Prepared by:
Center for Applied Linguistics
Language Assessment Division
Psychometrics and Quantitative Research Team

April 25, 2018
© 2018 Board of Regents of the University of Wisconsin System on behalf of the WIDA Consortium.

## The WIDA ACCESS for ELLs Technical Advisory Committee

This report has been reviewed by the WIDA ACCESS for ELLs Technical Advisory Committee (TAC), which is comprised of the following members:

- Jamal Abedi, Ph.D., Professor, Graduate School of Education, University of California, Davis and a research partner at the National Center for Research on Evaluation, Standards, and Student Testing (CRESST)
- Lyle Bachman, Ph.D., Professor Emeritus, Applied Linguistics, University of California, Los Angeles
- Akihito Kamata, Ph.D., Professor, Department of Education Policy and Leadership, Department of Psychology, Southern Methodist University
- Timothy Kurtz, Hanover High School, Hanover, New Hampshire
- Carol Myford, Ph.D., Professor Emerita, Educational Psychology, University of Illinois at Chicago

## Executive Summary

This is the 13th annual technical report on the ACCESS for ELLs® English Language Proficiency Test, and the second report on the ACCESS for ELLs 2.0 assessment. ACCESS for ELLs 2.0 measures the same constructs and uses the same scale as ACCESS for ELLs, but for the first time, the assessment is offered in an online, multi-stage adaptive format.

This technical report is produced as a service to members and potential members of the WIDA Consortium. The technical information herein is intended for use by those who have technical knowledge of test construction and measurement procedures, as stated in Standards for Educational and Psychological Testing (American Educational Research Association, American Psychological Association, National Council on Measurement in Education, 2014).

ACCESS for ELLs is intended to assess reliably and validly the English language development (ELD) of English language learners (ELLs) in Grades K-12 according to WIDA 2012 Amplification of the English Language Development Standards Kindergarten-Grade 12 (WIDA Consortium, 2012). Results on ACCESS for ELLs are used by WIDA Consortium states for monitoring the progress of students, for making decisions about exiting students from language support services, and for accountability.

ACCESS for ELLs 2.0 Series 401 was administered in school year 2016-17 in 35 states, the District of Columbia, the Commonwealth of the Northern Marianas, and the Virgin Islands of the United States, for a total of 38 state entities (henceforth "states"). ACCESS for ELLs 2.0 Series 401 was offered in two administrative formats, an online format (grades 1-12) and a paper format (kindergarten-grade 12). Table 0.1 summarizes the numbers of students, by state, who participated in the grades 1-12 assessment online, in the grades $1-12$ assessment on paper, the total number of students who participated in the grades $1-12$ assessment, the total number who participated in the Kindergarten assessment (only offered in the paper format), and the total participants in ACCESS K-12. The current report (WIDA ACCESS Technical Report 13B) provides technical information pertaining to ACCESS for ELLs 2.0 Series 401 Paper, including the Kindergarten assessment. A second report (WIDA ACCESS Technical Report 13A) provides technical information for the ACCESS for ELLs 2.0 Series 401 Online assessment.

Table 0.1
Participation in ACCESS for ELLs Online and Paper, Series 401

| State | Participants in ACCESS for ELLs Grades 1-12 |  |  | Participants in Kindergarten | Total Participants in ACCESS for ELLs Grades K-12 |
| :---: | :---: | :---: | :---: | :---: | :---: |

| UT | 34,945 | 6 | 34,951 | 4,975 | 39,926 |
| VA | 76,847 | 11,395 | 88,242 | 14,215 | 102,457 |
| VI | 1,023 | 0 | 1,023 | 96 | 1,119 |
| VT | 1,295 | 13 | 1,308 | 178 | 1,486 |
| WI | 42,080 | 180 | 42,260 | 5,531 | 47,791 |
| WY | 2,186 | 60 | 2,246 | 386 | 2,632 |
| Total | 1,231,359 | 408,352 | 1,639,711 | 244,067 | 1,883,778 |

This report follows the same structure as the ACCESS 1.0 technical reports. The report first provides background to the test (Chapter 1), followed by an argument-based validation framework to support the use of ACCESS for ELLs and to contextualize the data so that its interpretation and use are more transparent to stakeholders (Chapter 2). The rest of the report consists of paired chapters. The first chapter within each pair contains text that explains the data tables that follow in the second chapter. Information on the students who participated in the operational administration is presented (Chapters 3 and 4), followed by an explanation of the technical analyses conducted on each of the test forms that constitute ACCESS for ELLs 2.0 (Chapter 5) and the tables and figures of results (Chapter 6). The final chapters explain (Chapter 7) and present (Chapter 8) technical analyses based on the domain scores and composite scores by grade-level cluster. Note that Chapters 1-4 are in Volume 1, Chapters 5-6 are in Volume 2, and Chapters 7-8 are in Volume 3.

## Summary Highlights

This report presents a wealth of data documenting the technical properties of ACCESS for ELLs 2.0 Series 401 Paper, which cannot be fully summarized here. In addition to information on validity, the report presents information on reliability of test scores and the accuracy and consistency of proficiency level classifications, including information on conditional standard errors of measurement and a separate table highlighting conditional standard errors around the cut scores. Item-level analyses include item difficulty levels, fit of the items to the Rasch measurement model, and differential item functioning (DIF) analyses for each item or assessment task.

## Argument-based validation framework for ACCESS for ELLs

Starting with Series 301, Chapter 2 of the ACCESS for ELLs Annual Technical Report consists of an argument-based framework for supporting the validity of ACCESS for ELLs. This framework structures the information contained in this Annual Technical Report to support assertions about data collected via the assessment (i.e., Assessment Records). Specifically, tables and figures from this report are explicitly linked to claims related to Assessment Records through an Assessment Use Argument (AUA), which allows stakeholders to better interpret and use ACCESS for ELLs.

## Demographic data

The Series 401 Paper data set for analyses included the results of 652,419 students. The largest grade was Kindergarten with 244,067 students, while the smallest was Grade 12 with 9,925 students. Of the participating WIDA states, the largest was Florida with 279,510 students, while the smallest was Northern Mariana Islands with 78 students.

## Reliability and accuracy data

For most test users, the Overall Composite proficiency score, based on performances in Listening, Speaking, Reading, and Writing, is the major score used for making decisions about gains in student proficiency and exiting from language support services.

Results indicate that the reliability (stratified Cronbach's alpha, see 7.2.6 in Volume 3) of the Overall Composite score for Series 401 Paper, presented in Chapter 8 Table D, is very high across all grade-level clusters. For Kindergarten it was .973; for Grade 1, .939; for Grade 2, .952, for Grade 3, .940, for Grades 4-5, .945; for Grades 6-8, .949; and for Grades 9-12, . 951 . Likewise, as Table 0.1 shows, the accuracy of classification for decisions about student placement using the Overall Composite score around the proficiency level cut scores is very high across grade and proficiency levels. Because many WIDA Consortium states use the proficiency level score of 5.0 as a criterion for exiting students from language support services, the column headed $4 / 5 \mathrm{Cut}$ (the proficiency level score of 5.0) is of particular interest.

Table 0.2
Accuracy of Classification of Overall Score at Cut Points (Proficiency Level Score)

| Grade | $\mathbf{1 / 2} \mathbf{C u t}$ <br> $(\mathbf{2 . 0})$ | $\mathbf{2 / 3} \mathbf{C u t}$ <br> $\mathbf{( 3 . 0})$ | $\mathbf{3 / 4} \mathbf{C u t}$ <br> $\mathbf{( 4 . 0 )}$ | $\mathbf{4 / 5} \mathbf{C u t}$ <br> $\mathbf{( 5 . 0 )}$ | $\mathbf{5 / 6}$ Cut <br> $(\mathbf{6 . 0})$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| K | 0.952 | 0.954 | 0.963 | 0.982 | N/A |
| 1 | 0.970 | 0.929 | 0.949 | 0.990 | 0.999 |
| 2 | 0.984 | 0.956 | 0.920 | 0.965 | 0.999 |
| 3 | 0.985 | 0.963 | 0.908 | 0.948 | 0.996 |
| 4 | 0.980 | 0.963 | 0.915 | 0.927 | 0.992 |
| 5 | 0.981 | 0.965 | 0.921 | 0.906 | 0.993 |
| 6 | 0.978 | 0.954 | 0.921 | 0.972 | 0.999 |
| 7 | 0.973 | 0.950 | 0.923 | 0.969 | 0.998 |

| 9 | 0.967 | 0.950 | 0.931 | 0.954 | 0.998 |
| 10 | 0.966 | 0.945 | 0.933 | 0.968 | 0.999 |
| 11 | 0.967 | 0.943 | 0.935 | 0.976 | 0.999 |
| 12 | 0.974 | 0.944 | 0.937 | 0.982 | 1.000 |

## Overview of the Annual Technical Report

The multistate WIDA Consortium's ACCESS for ELLs was first operationally administered in 2005 in three states: Alabama, Maine, and Vermont. Results of that administration were reported in Annual Technical Report 1 (Series 100, 2004-05). This is the thirteenth technical report.

Because of the size of the complete report, it is presented in three volumes.
Volume I contains Chapters 1 to 4 . Chapter 1 provides background to the test. Readers unfamiliar with ACCESS for ELLs should pay particular attention to this chapter. Chapter 2
presents an argument-based approach for structuring the data contained in this report so that its interpretation and use are more transparent to stakeholders. Chapters 3 and 4 present information on the students who participated in the Series 401 Paper (2016-2017) operational administration, including overall results.

Volume II contains Chapters 5 and 6 . Chapter 5 presents background on the technical analyses conducted on each of the test forms and explains how to understand the tables and figures of results. Chapter 6 presents the results organized by

- Grade-level cluster (K, 1, 2, 3, 4-5, 6-8, 9-12); then by
- Domain (Listening, Reading, Writing, and Speaking, abbreviated List, Read, Writ, and Spek, respectively); then by
- Tier (A, B, C)

Thus, all of the results for Kindergarten are presented before the results for Grade 1, and all of the results for Grade 1 Listening are presented before results for Grade 1 Reading.

Volume III contains Chapters 7 and 8 . These chapters focus on results across tiers within gradelevel clusters, including the four composite scores (Oral Language, Literacy, Comprehension, and Overall). Chapter 7 presents background on the technical analyses and explains how to understand the tables and figures of results. Chapter 8 presents the results organized by

- Grade-level cluster (K, 1, 2, 3, 4-5, 6-8, 9-12); then by
- Score (Listening, Reading, Writing, Speaking, Oral Language Composite, Literacy Composite, Comprehension Composite, and Overall Composite, abbreviated List, Read, Writ, Spek, Oral, Litr, Cphn, and Over, respectively)

## Series 401 Paper: Special Considerations

## Data Exclusion: State of Michigan

Data for the production of the Annual Technical Report were received by CAL in late September of 2017. Data for the state of Michigan were not available in the system at the time of the initial data pull. Michigan data were received in an additional data draw in mid-November. In order to allow for the timely production of the report, analyses which pertain to the technical properties of test forms (the analyses included in Chapter 6 and Chapter 8) were conducted using the original September data. These analyses do not include data from the state of Michigan. Students from the state of Michigan constitute 14,145 of 652,419 total students in the ACCESS Paper population, a proportion of $2.17 \%$. Students from the state of Michigan are included in summary tables which pertain to the counts of students participating in the assessment (the tables in Chapter 4).

## Annotated Bibliography

## Technical Reports

The multistate WIDA Consortium's ACCESS for ELLs was first operationally administered in 2005 in three states: Alabama, Maine, and Vermont. Results of that administration were reported in Annual Technical Report 1 (Series 100, 2004-2005). This is a list of reports that describe the development of ACCESS for ELLs.

Center for Applied Linguistics (2015). ACCESS for ELLs Series 302 Media-Based Listening Field Test Technical Brief. (WIDA Consortium.

This report provides detailed information on the conceptualization, development, and field testing of the ACCESS for ELLs Media-Based Listening Test.

Gottlieb, M., \& Boals, T. (2005). Considerations in Reconfiguring Cohorts and Resetting Annual Measurable Achievement Objectives (AMAOs) based on ACCESS for ELLs Data (WIDA Consortium Technical Report No. 3).
This report is intended to assist states with the transition to a standards-based test and determining their AMAOs using ACCESS for ELLs.
Gottlieb, M. \& Kenyon, D. M. (2006). The Bridge Study between Tests of English Language Proficiency and ACCESS for ELLs (WIDA Consortium Technical Report No. 2).

This report provides the background, procedures, and results of a study intended to establish estimates of comparability between ACCESS for ELLs and four other English language tests used by Consortium member states. Students in Illinois and Rhode Island were administered ACCESS for ELLs along with one of the other four tests, and results on the four tests were compared with results on ACCESS for ELLs. Results allow states, districts, and schools to understand and report ACCESS for ELLs scores and to establish continuity between previous tests and ACCESS for ELLs.

Kenyon, D. M. (2006). Development and Field Test of ACCESS for ELLs (WIDA Consortium Technical Report No. 1).
This report provides detailed information on the conceptualization, development, and field testing of ACCESS for ELLs. It also provides technical data on equating and scaling procedures, standard setting and operational score reporting, analyses of reliability and errors of measurement, and two initial validity studies.

Kenyon, D. M., Ryu, J. R., \& MacGregor, D. (2013). Setting Grade Level Cut Scores for ACCESS for ELLs (WIDA Consortium Technical Report No. 4).

This report describes the technical procedures and outcomes of the process to move from grade-level cluster cut scores to grade-level cut scores. Proposed cut scores were
determined mathematically and then reviewed and revised in a standard-setting process involving 75 teachers from 14 WIDA Consortium states.

MacGregor, D., Kenyon, D. M., Gibson, S., \& Evans, E. (2009). Development and Field Test of Kindergarten ACCESS for ELLs. (WIDA Consortium).

This report provides detailed information on the conceptualization, development, and field testing of Kindergarten ACCESS for ELLs. It also provides technical data on equating and scaling procedures, standard setting and operational score reporting, and analyses of reliability and errors of measurement.

## Annual Technical Reports for ACCESS for ELLs

Below is a list of annual technical reports for ACCESS for ELLs, listed by year of publication. These reports provide extensive analysis of the results from the operational administrations of ACCESS for ELLs. They provide detailed information on student results broken down by gradelevel cluster, grade, and tier. They also provide detailed information on test and item characteristics.

Kenyon, D. M., MacGregor, D., Ryu, J. R., Cho, B., \& Louguit, M. (2006). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 100, 20042005 Administration (WIDA Consortium Annual Technical Report No. 1).

Kenyon, D. M., MacGregor, D., Louguit, M., Cho, B., \& Ryu, J. R. (2007). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 101, 20052006 Administration (WIDA Consortium Annual Technical Report No. 2).

MacGregor, D., Louguit, M., Ryu, J. R., Kenyon, D. M., \& Li, D. (2008). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 102, 20062007 Administration (WIDA Consortium Annual Technical Report No. 3).

MacGregor, D., Louguit, M., Huang, X., \& Kenyon, D. M. (2009). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 103, 2007-2008 Administration (WIDA Consortium Annual Technical Report No. 4).

MacGregor, D., Louguit, M., Yanosky, T., Fidelman, C. G., Pan, M., Huang, X., \& Kenyon, D. M. (2010). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 200, 2008-2009 Administration (WIDA Consortium Annual Technical Report No. 5).

Yanosky, T., Yen, S., Louguit, M., MacGregor, D., Zhang, Y., \& Kenyon, D. M. (2011). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 201, 2009-2010 Administration (WIDA Consortium Annual Technical Report No. 6).

Proficiency Test, Series 202, 2010-2011 Administration (WIDA Consortium Annual Technical Report No. 7).

Yanosky, T., Amos, M., Cameron, C., Louguit, M., MacGregor, D., Yen, S., \& Kenyon, D. M. (2013). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 203, 2011-2012 Administration (WIDA Consortium Annual Technical Report No. 8).

Center for Applied Linguistics (2014). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 301, 2012-2013 Administration (WIDA Consortium Annual Technical Report No. 9).

Center for Applied Linguistics (2015). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 302, 2013-2014 Administration (WIDA Consortium Annual Technical Report No. 10).

Center for Applied Linguistics (2016). Annual Technical Report for ACCESS for ELLs ${ }^{\circledR}$ English Language Proficiency Test, Series 303, 2014-2015 Administration (WIDA Consortium Annual Technical Report No. 11).

## Other Documentation

Bachman, L. F. (2005). Building and supporting a case for test use. Language Assessment Quarterly, 2(1), 1-34.

This article describes how an argument for test use might be structured so as to provide a clear linkage from test performance to interpretations and from interpretations to uses.

Bachman, L. F., \& Palmer, A. S. (2010). Language assessment in practice. Oxford: Oxford University Press.

This book presents the Assessment Use Argument, which provides a framework for justifying the intended uses of an assessment, as well as a guide for the design and development of the assessment itself.

Bauman, J., Boals, T., Cranley, E., Gottlieb, M., \& Kenyon, D. M. (2007). The newly developed English language tests (World-Class Instructional Design and Assessment - WIDA). In J. Abedi (Ed.), English Language Proficiency Assessment in the Nation: Current Status and Future Practice. Davis: University of California.

In this book chapter, the authors describe the test development process, from the development of standards through the development of items, field testing, and operationalization. They also report on validation of the test, accommodations, the test administration and technical manuals, and score reporting.

Chapelle, C. A., Enright, M.K. \& Jamieson, J. (Eds.) (2008). Building a validity argument for the Test of English as a Foreign Language. London: Routledge.
This book uses the Test of English as a Foreign Language ${ }^{\text {TM }}$ as a case study for validating test design. It attempts to meet the standards of educational measurement while also drawing on theory related to English language proficiency.

Chapelle, C. A., Enright, M. K., \& Jamieson, J. (2010). Does an argument-based approach to validity make a difference? Educational Measurement: Issues and Practice, 29(1), 313.

Drawing on experience between 2000 and 2007 in developing a validity argument for the high-stakes Test of English as a Foreign Language ${ }^{\text {TM }}$, this paper evaluates the differences between the argument-based approach to validity as presented by Kane (2006) and that described in the 1999 AERA/APA/NCME Standards for Educational and Psychological Testing.

Cook, H. G. (2007). Alignment Study Report: The WIDA Consortium's English Language Proficiency Standards for English Language Learners in Kindergarten through Grade 12 to ACCESS for ELLs ${ }^{\circledR}$ Assessment. Madison, WI: WIDA Consortium.

In this report, the author describes a study to align the WIDA Standards to the ACCESS for ELLs test. The study was designed to address two questions: how well the test measures the proficiency levels described in the Standards, and how well the different domains of each standard are addressed by the domains of the test. The author concludes that overall ACCESS for ELLs is adequately aligned to the Standards.

Cook, H. G., Boals, T., Wilmes, C., \& Santos, M. (2007). Issues in the Development of Annual Measurable Achievement Objectives (AMAOs) for WIDA Consortium States. Madison, WI: WIDA Consortium.

In this paper, the authors offer guidance to states in formulating Annual Measurable Achievement Objectives for English language learners.

Fox, J. \& Fairbairn, S. (2011). Test review: ACCESS for ELLs®. Language Testing, 28 (3): 425-431.

The author provides a thorough review of ACCESS for ELLs, using the eight criteria enumerated in Fairbairn and Fox (2009).

Gottlieb, M. (2004). English Language Proficiency Standards for English Language Learners in Kindergarten through Grade 12: Framework for Large-Scale State and Classroom Assessment. Madison, WI: WIDA Consortium.

These documents contain the WIDA Standards and describe the rationale behind and development of the frameworks for large-scale state and classroom assessments. These frameworks comprise English Language Development standards, language domains,
grade-level clusters, language proficiency levels and the model performance indicators upon which ACCESS for ELLs is based. They are meant to guide curriculum development, instruction, and assessment of English language learners.

Kane, M. (2006). Validation. In R. Brennan, (Ed.), Educational Measurement (4 ${ }^{\text {th }}$ Edition) (pp. 18-64). Westport, CT: Greenwood Publishing.

This book chapter presents a conceptualization of test validity where evidence and logical argument are brought together to evaluate claims and propositions about the proposed uses and interpretations of test results.

Kenyon, D. M., MacGregor, D., Li, D., \& Cook, H. G. (2011). Issues in vertical scaling of a K12 English language proficiency test. Language Testing, 28 (3): 383-400.

In this article, the authors describe the procedure used to place ACCESS for ELLs results on a vertical scale, and they discuss studies conducted to test the effectiveness of that scale.

Mislevy, R. J., Almond, R. G., \& Lukas, J. F. (2004). A brief introduction to evidence-centered design (CSE Report 632). CA: Center for Research on Evaluation, Standards, and Student Testing.

This paper provides an introduction to the basic ideas of Evidence-Centered Design, an approach to constructing educational assessments in terms of evidentiary arguments. It includes some of the terminology and models that have been developed to implement the approach.

National Research Council. (2011). Allocating federal funds for state programs for English language learners. Washington, DC: The National Academies Press.
This report includes detailed descriptions of six English language proficiency tests, including ACCESS for ELLs, along with information about the reliability and validity of the tests.

Parker, C. E., Louie, J., \& O’Dwyer, L. (2009). New measures of English language proficiency and their relationship to performance on large-scale content assessments (Issues \& Answers Report, REL 2009-No. 066). Washington, DC: U.S. Department of Education, Institute of Education Sciences, National Center for Education Evaluation and Regional Assistance, Regional Educational Laboratory Northeast and Islands. Retrieved from http://ies.ed.gov/ncee/edlabs, January 29, 2009.

This report describes a study investigating how well the domain tests on ACCESS for ELLs predict performance on a content test. Results indicate that the Reading and Writing tests are the strongest predictors.

Römhild, A., Kenyon, D. M., \& MacGregor, D. (2011). Exploring domain-general and domainspecific linguistic knowledge in the assessment of academic English language proficiency. Language Assessment Quarterly, 8, 213-228.

This article reports on a confirmatory factor analysis study conducted to model domain-specific and domain-general variance on ACCESS for ELLs. The authors found that, while domain-general linguistic knowledge represents the primary dimension across almost all test forms, domain-specific knowledge becomes increasingly salient as proficiency level increases.

WIDA Consortium. (2007). English Language Proficiency Standards and Resource Guide, 2007 Edition, PreKindergarten through Grade 12. Madison, Wisconsin: Board of Regents of the University of Wisconsin System.

This document presents the second edition of the WIDA English Language Development Standards, which were released in 2007. The second edition included the addition of formative and summative frameworks for assessment and instruction, the separation of Kindergarten into its own grade-level cluster, and the addition of the sixth proficiency level, "Reaching."

WIDA Consortium. (2012). 2012 Amplification of the English Language Development Standards Kindergarten-Grade 12. Madison, Wisconsin: Board of Regents of the University of Wisconsin System.

This document describes the amplified Strands of Model Performance Indicators that represent the WIDA English Language Development Standards. The amplification reflects states' content standards and the fluid and ongoing process of language development.

WIDA Consortium. (2013). Interpretive Guide for Score Reports Spring 2013 (WIDA Consortium). Madison, WI: The Board of Regents of the University of Wisconsin System.

This report provides an overview on how ACCESS for ELLs is scored and how those scores are reported. Part 1 gives a description of scores for 2014. Part 2 gives suggestions on how states can use scores, as well as examples of score reports to various stakeholders. Part 3 provides guidance on interpreting the reports.

## 1. Description of ACCESS for ELLs English Language Proficiency Test

### 1.1 Purpose of ACCESS for ELLs

The overarching purpose of ACCESS for ELLs 2.0 is to assess the developing English language proficiency of English language learners (ELLs) in Grades K-12 in the United States as defined by the multi-state WIDA Consortium, first in the English Language Proficiency Standards (Gottlieb, 2004; WIDA Consortium, 2007), then in the amplified 2012 English Language Development (ELD) Standards (WIDA Consortium, 2012). The WIDA ELD Standards, which correspond to the academic language identified in state academic content standards, describe six levels of developing English language proficiency and form the core of the WIDA Consortium's approach to instructing and testing ELLs. ACCESS 2.0 may thus be described as a standardsbased English language proficiency test designed to measure the social and academic language proficiency of ELLs in English. It assesses social and instructional English as well as the academic language associated with language arts, mathematics, science, and social studies within the school context across the four language domains (Listening, Reading, Writing, and Speaking).

Other major purposes of ACCESS 2.0 include:

- Identifying the English language proficiency level of students with respect to the WIDA ELD Standards used in all member states of the WIDA Consortium,
- Identifying students who have attained English language proficiency,
- Assessing annual English language proficiency gains using a standards-based assessment instrument,
- Providing districts with information that will help them to evaluate the effectiveness of their language instructional educational programs and determine staffing requirements,
- Providing data for meeting federal and state statutory requirements with respect to student assessment, and
- Providing information that enhances instruction and learning in programs for English language learners.

ACCESS 2.0 is offered in two formats: ACCESS 2.0 Paper, described in this report, and ACCESS 2.0 Online, described in a companion report.

### 1.2 Format of ACCESS 2.0 Paper

### 1.2.1 Integration with the Standards

The original ACCESS test design, from the structure of the assessment system to the content of each test booklet and item, is built upon the five foundational WIDA ELD Standards:

Standard 1: ELLs communicate in English for Social and Instructional purposes within the school setting.

Standard 2: ELLs communicate information, ideas, and concepts necessary for academic success in the content area of Language Arts.

Standard 3: ELLs communicate information, ideas, and concepts necessary for academic success in the content area of Mathematics.

Standard 4: ELLs communicate information, ideas, and concepts necessary for academic success in the content area of Science.

Standard 5: ELLs communicate information, ideas, and concepts necessary for academic success in the content area of Social Studies.

For practical purposes, the five Standards are abbreviated as follows in this report:

- Social and Instructional language: SIL
- Language of Language Arts: LoLA
- Language of Math: LoMA
- Language of Science: LoSC
- Language of Social Studies: LoSS

Every selected-response item and every performance-based task on ACCESS for ELLs targets at least one of these five Standards. In the case of some test items and tasks, the standards are combined as follows:

- Integrated Social and Instructional Language (SIL), Language of Language Arts (LoLA), and Language of Social Studies (LoSS): IT
- Language of Math (LoMA) and Language of Science (LoSC): MS
- Language of Language Arts (LoLA) and Language of Social Studies (LoSS): LS

### 1.2.2 Grade-Level Clusters

The grade-level cluster structure for ACCESS 2.0 Paper is as follows: K, 1, 2, 3, 4-5, 6-8, 9-12. In the lower grades (grades $1-5$ ), test forms may be shared across grade-level clusters. As described in Sections 1.3.3 and 1.3.4 below, the development of the Listening and Reading tests was conducted as part of ACCESS 1.0, which has a cluster structure that differs from that of

ACCESS 2.0 in the lower grades. The Speaking and Writing tests were developed using the ACCESS 2.0 Online cluster structure. ACCESS 2.0 Paper clusters, therefore, bridge the cluster structure of ACCESS 1.0 and ACCESS 2.0 Online. For example, the Cluster 2 tests in the domains of Reading and Listening are the same test forms as the Cluster 1 tests. The Cluster 2 tests in the domains of Speaking and Writing are the same test forms as the Cluster 3 tests in these domains. Table 1.2.2A details the grade-level cluster structure of ACCESS 2.0 Paper and the shared forms across clusters.

Table 1.2.2A
ACCESS 2.0 Paper Grade-level Clusters and Shared Forms Across Clusters

| ACCESS 2.0 Paper Grade-level Clusters | Shared Test Forms (Listening and Reading) | Shared Test Forms (Speaking and Writing) | Grade |
| :---: | :---: | :---: | :---: |
| K | K | K | K |
| 1 | Cluster 1 and Cluster 2 | Cluster 1 | 1 |
| 2 |  | Cluster 2 and Cluster 3 | 2 |
| 3 | Cluster 3 and Cluster 4-5 |  | 3 |
| 4-5 |  | Cluster 4-5 | 4 |
|  |  |  | 5 |
| 6-8 | Cluster 6-8 | Cluster 6-8 | 6 |
|  |  |  | 7 |
|  |  |  | 8 |
| 9-12 | Cluster 9-12 | Cluster 9-12 | 9 |
|  |  |  | 10 |
|  |  |  | 11 |
|  |  |  | 12 |

Note that in our analyses of student participation in the assessment (analyses discussed and presented in chapters 3 and 4), analysis is conducted by cluster (K, 1, 2, 3, 4-5, 6-8, 9-12). In our analyses of test forms (chapters 5 and 6), analysis is conducted by test form (i.e. in Listening and Reading, a single analysis is conducted for the cluster 1 and cluster 2 form). These analyses are presented by cluster; if a table of results pertains to more than one cluster, it is repeated in each cluster.

### 1.2.3 Language Domains

The WIDA ELD Standards describe developing English language proficiency for each of the four language domains: Listening, Reading, Writing, and Speaking. Thus, ACCESS 2.0 Paper contains four sections, each assessing an individual language domain.

### 1.2.4 Language Proficiency Levels

The WIDA ELD Standards document fully delineates the continuum of language development via five language proficiency levels (PLs) (WIDA, 2012), with scores indicating progression through each level. These levels are Entering, Emerging, Developing, Expanding, and Bridging. There is also a final stage known as Reaching, which is used to describe students who have progressed across the entire WIDA English language proficiency continuum; as such, scores do
not indicate progression through this level. The proficiency levels are shown graphically in Figure 1.2.4A.

Figure 1.2.4A. The language proficiency levels of the WIDA ELD Standards.
These language proficiency levels are embedded in the WIDA ELD Standards in a two-pronged fashion.

First, they appear in the performance definitions. According to the WIDA ELD Standards, the performance definitions provide a global overview of the stages of the language acquisition process. As such, they complement the model performance indicators (MPIs; see below) for each language proficiency level. The performance definitions are based on three criteria: (a) vocabulary usage at the word/phrase dimension; (b) language forms and conventions at the sentence dimension; and (c) linguistic complexity at the discourse dimension. Vocabulary usage refers to students' increasing comprehension and production of the technical language required for success in the academic content areas. Language forms and conventions refers to the increasing development of phonological, syntactic, and semantic understanding in receptive skills or control of usage in productive language skills. Linguistic complexity refers to students' demonstration of oral interaction or writing of increasing quantity and variety.

Second, the language proficiency levels of the WIDA ELD Standards are fully embedded in the accompanying MPIs, which exemplify the Standards. The MPIs describe the expectations for ELL students in each of the five Standards, by grade-level cluster, across the four language
domains. That is, an MPI at each of the five language proficiency levels can be found within each combination of Standard, grade-level cluster, and language domain. Reaching (PL 6), represents the end of the continuum rather than another level of language proficiency. The sequence of these five MPIs together describes a logical progression and accumulation of skills on the path from the lowest level of English language proficiency to full English language proficiency for academic success. The grouping of five MPIs in logical progression is called a "strand."

ACCESS 2.0 is based on individual MPIs organized into strands within the WIDA ELD Standards. ${ }^{1}$ Each selected-response item or performance-based task on ACCESS for ELLs is carefully developed, reviewed, piloted, and field tested to ensure that it allows students to demonstrate accomplishment of the targeted MPI.

### 1.2.5 Tiers

Tests must be at the appropriate difficulty level for individual test takers in order to be valid and reliable. As one might expect, test items and tasks that allow Entering (PL 1) or Emerging (PL 2) students to demonstrate accomplishment of the MPIs at their proficiency level will not allow Expanding (PL 4) or Bridging (PL 5) students to demonstrate the full extent of their language proficiency. Likewise, items and tasks that allow Expanding (PL 4) and Bridging (PL 5) students to demonstrate accomplishment of the MPIs at their level would be far too challenging for Entering (PL 1) or Emerging (PL 2) students. Items that are far too easy for test takers may be boring and lead to inattentiveness on the part of students; items that are far too difficult for test takers may be frustrating and discourage them from performing their best. But more importantly, items that are too easy or too hard for a student add very little to the accuracy or quality of the measurement of that student's language proficiency.

In order to make ACCESS 2.0 appropriate to the proficiency level of individual students across the wide range of proficiencies described in the WIDA ELD Standards, the solution is to present the test items in three overlapping tiers (A, B, and C) for each grade-level cluster. Figure 1.2.5A shows how the different tiers map to the language proficiency levels.

[^0]

Figure 1.2.5.A. Tier structure of ACCESS for ELLs

Each grade 1-12 test-taker takes either the Tier A, Tier B, or Tier C form of the assessment. The Kindergarten assessment is not tiered.

In ACCESS 2.0 Paper, the Listening and Reading tests have three forms (that is, one at each tier) for each grade-level cluster. Tier A has items and tasks designed to allow students at the lowest language proficiency levels (PLs 1 and 2) to meet the WIDA ELD Standards at their language proficiency levels, and it includes some items targeted to PL 3. Likewise, Tier C has items and tasks designed to allow students at the highest language proficiency levels (PLs 4 and 5) to meet the WIDA ELD Standards at their language proficiency levels, while also containing some items targeted to PL 3. (Note that, in order to assure that students are accurately measured to PL 6, Tier C also includes some items that are slightly more difficult than PL 5 items.) In this test design, the tiers overlap: while Tier A and Tier C have little in common, Tier B is composed of tasks from both Tiers A (PL 2) and C (PL 4), as well as tasks from PL 3. This overlap of tiers ensures that all of the proficiency levels are assessed across the assessment as a whole; however, each
test booklet need not contain an unduly large number of test items. The overlap also ensures that the entire language proficiency range is covered. Thus, a test booklet at any given tier is primarily composed of items and tasks that span three targeted language proficiency levels.

In the domains of Writing and Speaking, for each grade-level cluster, there are two forms: a Tier A form, and a shared Tier B and Tier C form. The Tier A form of the Writing test has items targeting PLs 1,2 , and 3 . The Writing test form that is shared by Tier B and Tier C has items targeting PLs 4 and 5. The Tier A form of the Speaking test has item targeting PLs 1 and 3, and the test form that is shared by Tier B and Tier C has items targeting PLs 3 and 5.

### 1.3 Test Development

Development of ACCESS 2.0 Series 400 Paper marked the transition point from the original ACCESS testing program, which was entirely paper-based, to the launch of ACCESS 2.0, which is offered both in Online and Paper formats. Development for ACCESS 2.0 Series 401 Paper continues to reflects this transition. The Listening and Reading tests for ACCESS 2.0 Series 401 Paper were developed under the framework of ACCESS, while the Writing and Speaking tests were developed under the ACCESS 2.0 framework. The general process of item writing and editing, and of item content bias and sensitivity reviews, is similar from ACCESS to ACCESS 2.0; these processes are described in the sections below and apply to all four domains of the test. Details are also provided on the development of the Listening and Reading tests and then on development of the Writing and Speaking tests. Finally, we provide a brief overview of the development of the Kindergarten test.

### 1.3.1 Item Writing and Editing

Initial item writing wass done by participants in an online item writing course or item writing workshop conducted by the Center for Applied Linguistics (CAL). Then, the items generated are reviewed internally and selected for further development based on how well they fit the Standards and MPIs, and how different they are in terms of content from the previous year's items. The chosen items are refined by CAL staff before undergoing item content and bias and sensitivity reviews.

### 1.3.2 Item Content and Bias and Sensitivity Reviews

After items are internally refined, they are reviewed by two panels: a content review panel and a bias and sensitivity review panel. The panels consist of educators from WIDA Consortium states. Items are submitted to the content review panel to assure that the content is accessible and relevant to students in the targeted grade-level cluster, and that each item or task matches the MPI from the WIDA ELD Standards that it is intended to assess. The bias and sensitivity review panel inspects the items for potential bias that may unfairly advantage some students over others. Bias and sensitivity panelists represent a variety of language backgrounds and ethnicities. Based on their recommendations, the items are revised as necessary.

### 1.3.3 Development of Listening and Reading

The Listening and Reading components of ACCESS 2.0 Series 401 Paper were created during the original ACCESS development cycle. ACCESS was first field tested in 2004, and from 2004-2014, development continued for ACCESS, culminating in Series 303, operational in 2014-2015. For further detail on this original field test and on the processes for ongoing item development from 2004-2014, see the ACCESS for ELLs Technical Reports, particularly ACCESS for ELLs Technical Report No. 1, Development and Field Test of ACCESS for ELLs (Kenyon, 2006) and ACCESS for ELLs Technical Report No. 11 (2016).

The Listening and Reading tests for ACCESS 2.0 Series 401 Paper are composed of the same sets of items, across all grade-level clusters and tiers, as ACCESS Series 303, with minor exceptions. First, the grade-level cluster structure was updated for ACCESS 2.0. Second, there are two Reading test forms in which items are not the same between Series 303 and Series 401 Paper. In the form shared across Clusters 1 and 2 (Tier C), three items from the Series 303 form were substituted with three items from Series 203 to produce the Series 401 form. This substitution was made to avoid having very similar text appear in the key for different items on the same test form. Likewise, in the form shared across Clusters 3 and 4-5 (Tier B), three items from the Series 303 form were substituted with three items from Series 203 to produce the Series 401 form. This substitution was made to avoid a potential sensitivity issue in the wake of 2015 current events.

### 1.3.4 Development of Writing and Speaking

The Writing and Speaking tests for ACCESS 2.0 Series 401 Paper were developed to be shared across the Online and Paper versions of ACCESS 2.0. In other words, the Online and Paper versions of the tests have the same tasks, by grade-level cluster and tier, with minor differences. Writing items were developed using the processes for Online Writing task development (see the companion Annual Technical Report for Online ACCESS for further detail), and then converted in format so they could be used in the Paper test. There are therefore some differences in presentation between the Online and Paper test which result from the mode difference in the domain of Writing. Speaking tasks also have some differences in presentation between online and paper. In addition, the Paper test does not include the Speaking tier pre-A, which is included on the Online test. ${ }^{2}$ Second, in order to accommodate the tier structure of Listening and Reading, the Paper test maintains the tier structure of ACCESS for ELLs 1.0, which was provided in three tiers (A, B, and C). Writing and Speaking tasks, however, were developed for ACCESS for ELLs 2.0 Online, which has two tiers in these domains ( A and $\mathrm{B} / \mathrm{C}$ ). To bridge the structure of ACCESS for ELLs 1.0 and ACCESS for ELLs 2.0 Online, the same test form is shared across Tier B and Tier C Writing and Speaking tests. Table 1.3.2.A provides a graphic representation of this tier structure.

[^1]Table 1.3.2A
ACCESS 2.0 Paper Tier Structure and Shared Forms Across Tiers in Writing and Speaking

| Domain | Tier | Shared forms |
| :--- | :--- | :--- |
| Writing | A | A |
|  | B | B and C are shared |
|  | C | A |
| Speaking | A | B and C are shared |
|  | B |  |
|  | C |  |

### 1.3.4.1 Development of Tasks

For Writing tasks, after the external bias, sensitivity and content reviews, tasks are subject to small-scale tryouts, led by CAL staff. In these tryouts, candidate folders are administered to students; student responses, as well as observations and interviews, inform further revisions to the folders. A small-scale stand-alone field test of Writing folders is conducted, with responses scored at CAL, followed by a qualitative analysis of the collected responses. The main purposes of this small-scale field testing are to 1 ) confirm that the tasks are functioning as intended, 2) identify preliminary exemplars that have potential to be turned into anchors in operational scoring, and 3 ) inform the rating of the tasks when they become operational.

The development of Speaking tasks is similar to that of Writing, but, as with Listening and Reading, all Speaking tasks undergo large-scale field testing using the computer-based test format. Thus, Speaking tasks undergo both quantitative and qualitative analyses following the field test to determine their appropriateness for inclusion in the next year's operational test. After field testing the Speaking tasks are then produced in the paper-based format.

Many of the speaking folders used in Series 401 were previously field tested as part of Series 400 and then further revised and field tested again for Series 401 . Much of the content of the Speaking items on Series 401 was adapted for ACCESS 2.0 from both operational items from previous paper-based test series and from materials that were not developed to finality for previous test series. Some folder content was created specifically for ACCESS 2.0.

### 1.3.5 Development of Kindergarten Test

A separate field test was conducted for the Kindergarten test in 2008 in Washington, D.C. The final version of the adaptive Kindergarten assessment was produced by first choosing the Listening and Reading folders (i.e., sets of thematically-related items) that contained items that were empirically the easiest for first graders based on the data collected from the field test. These folders were ordered from easiest to hardest on the Kindergarten assessment. The Writing portion of the Kindergarten assessment included very simple writing tasks that were adapted from the SIL Writing tasks on the original ACCESS Cluster 1-2 Tier A test form. The Speaking
portion of the Kindergarten assessment was the same as that of the original ACCESS Cluster 1-2 test form, except it included only SIL and LoLA/LoSS tasks, in order to reduce testing time.

The adaptive administration of the Kindergarten assessment includes stopping rules. In any domain, if a student does not get at least two items in any folder correct, the administrator stops testing in that domain and moves on to the next domain.

A total of 154 students participated in the Kindergarten field test. Of those, $55 \%$ were boys ( 84 students) and $45 \%$ were girls ( 70 students). Spanish speakers comprised $90.2 \%$ (139) of the sample; the only other language with more than one student was Vietnamese (3).

### 1.3.6 Reporting Scale

ACCESS has a vertically-equated scale (i.e., one that can measure progress across the grade levels from $K$ to 12), as well as being horizontally equated across tiers within each grade-level cluster. Scale scores are calculated by transforming the person ability estimate via a scaling equation. The scaling equations for each domain are provided in Chapter 6, Table D. In the domains of Listening and Reading, the ACCESS scale was maintained through the transition from ACCESS 1.0 to ACCESS 2.0 in Series 400, and is continued to Series 401 (evidence for scale maintenance from ACCES 1.0 to ACCESS 2.0 can be found in Center for Applied Linguistics [2016]). In the domains of Writing and Speaking, a study was conducted in the summer of 2016 to reconstruct the scoring scale (see Center for Applied Linguistics [2017]).

The scale runs from 100 to 600 scale score points. The scale has an interpretive center point across domains and composites. The centering value is 350 , which represents, for original ACCESS, the cut score between PLs 3 and 4 for grade 5. The scale has a lower bound of 100 (i.e., 250 points lower than the center of 350 ) and an upper bound of 600 (i.e., 250 points higher than 350). In other words, conceptually, students from Grades K-2 with the lowest language proficiency in any domain can go no lower than a scale score of 100 while students from Cluster $9-12$ with the highest language proficiency in any domain can go no higher than 600 . Observed scores on all tests must fall between these extremes.

It should be noted that a scale score is an interpretation of a latent ability measure and not a record of "points" earned on the test. In other words, 100 does not necessarily represent a score of 0 at all grade-level clusters, nor does 600 represent a perfect score. In fact, due to the technical nature of a vertical scale, as one moves from grade to grade, the scale adjusts for developmental growth. Thus, even if a student consistently receives a score of 0 while moving from grade-level cluster to grade-level cluster, the student's scale score on a vertical scale would show an increase, even if very slight.

Thus, to interpret appropriately the meaning of the scale score, a series of standard-setting studies were conducted, discussed in Section 1.3.7. We focus on the creation of the ACCESS for ELLs scale score here.

For details on the initial development of the ACCESS score scale, conducted subsequent to the first field test administration, see ACCESS for ELLs Technical Report No. 1, Development and Field Test of ACCESS for ELLs (Kenyon, 2006), as well as Kenyon, MacGregor, Li, and Cook (2011).

Throughout the duration of ACCESS for ELLs 1.0, annual equating procedures were conducted to ensure that test results were reported on a consistent scale, year-to-year. This annual equating is the process used to maintain the ACCESS score scale.

The reporting scale for ACCESS 2.0 Series 401 Listening and Reading maintains the same scale as ACCESS. In the domains of Writing and Speaking, a study was conducted in the summer of 2016 to reconstruct the logit scale (see Center for Applied Linguistics [2017]).
The logit scale is transformed into a reporting scale by means of a linear transformation of the logit scores. There is a separate scale, and hence a separate transformation constant, for each of the four domains: Listening, Reading, Writing, and Speaking.

### 1.3.7 Standard Setting

Proficiency Level (PL) scores are interpretations of these scale scores in terms of the PLs described in the WIDA ELD Standards. These interpretations derive from a series of standard setting studies, in which educators reviewed evidence from the test, either in the form of items for the selected response sections (Listening and Reading) or student portfolios for the constructed response sections (Writing and Speaking), to establish cut scores between the PLs. The first standard setting study for ACCESS took place in 2005; it established cut scores for all four domains by grade-level cluster (Kenyon, 2006). The second cut score study took place in 2007; it established cut sores for all four domains by grade level (Kenyon, Ryu, \& MacGregor, 2013). These cut scores were used to derive PL scores through Series 400 of ACCESS 2.0 Online. A third cut score study was conducted in summer 2016 (Cook and MacGregor, 2017). The purpose of this study was to re-examine cut scores for each of the PLs on the new ACCESS 2.0 assessment in light of the migration from the paper-and-pencil only assessment, the revision of the Speaking test, and the influence of college- and career-ready standards. Test Series 401 is the first series which employed these newly revised proficiency level cut scores. New cut scores apply to all grades $\mathrm{K}-12$ of the Paper assessment.

### 1.4 Reporting of Results

### 1.4.1 Scale Scores

ACCESS scores are reported as both scale scores and proficiency level scores. Scale scores, ranging from 100 to 600, are given for all four language domains. In addition, four composite scores, also ranging from 100 to 600, are given: Oral Language, Literacy, Comprehension, and Overall Composite.

The four composite scores are calculated using the following scale score weighting scheme:

- Oral Language (50\% Listening + 50\% Speaking)
- Literacy ( $50 \%$ Reading $+50 \%$ Writing)
- Comprehension ( $30 \%$ Listening $+70 \%$ Reading)
- Overall Composite ( $15 \%$ Listening $+15 \%$ Speaking $+35 \%$ Reading $+35 \%$ Writing)

Figure 1.5.1A depicts the weighting for each of the composite scores. As shown, the Overall Composite is computed using scores from all four domains. Each of the other three composites is shown with the weighting of domains, in terms of the weighting used for the Overall Composite. As the diagram shows, more weighting is given to the literacy skills than to the oral skills for the Overall Composite. This weighting resulted from a policy decision by the WIDA Board before the first operational administration of ACCESS, based on the view that literacy skills are paramount in developing academic language proficiency.

Figure 1.5.1A. Domain Composites

### 1.4.2 Language Proficiency Level Scores

In addition to the ACCESS scale scores, test score users also receive proficiency level scores. These scores are interpretive; that is, they interpret a student's scale score in terms of the results of the standard setting study. The cut scores between proficiency levels are presented in Tables $1.4 .2 \mathrm{~A}-\mathrm{H}$ and reflect the adoption of the grade-level cut scores for Series 401 and beyond, as well as the cut scores adapted for Kindergarten for Series 200 and beyond.

Table 1.4.2 A
Cut Scores (Listening)

| Grades | Domain | Cut |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1/2 | 2/3 | 3/4 | 4/5 | 5/6 |
| K | List | 229 | 251 | 278 | 286 | 308 |
| 1 | List | 236 | 259 | 291 | 303 | 327 |
| 2 | List | 245 | 283 | 314 | 330 | 354 |
| 3 | List | 262 | 300 | 331 | 349 | 374 |

| 11 | Over | 325 | 356 | 397 | 429 | 459 |
| 12 | Over | 331 | 362 | 402 | 434 | 466 |

A PL score consists of a two-digit decimal number (e.g., 4.5). The first digit represents the student's overall PL range based on the student's scale score. The number to the right of the decimal is an indication of the proportion of the range between cut scores that the student's scale score represents. A score of 4.5 , for example, tells us that the student is in PL4 and that his/her scale score is halfway between the cut scores for Levels 4 and 5.

Unlike the scale scores, which form an interval scale and are continuous across grades from Kindergarten to Grade 12, PL scores are dependent upon which grade a student was in when ACCESS 2.0 Online was administered. Using the cut scores newly in effect for Series 401, if a

Grade 2 student receives a 350 in Listening, it would be interpreted as a PL score of 5.8; if a Grade 5 student receives a 350 in Listening, it would be a 3.8 ; if a Grade 8 student receives a 350 in Listening, it would be a 3.1; and if a Grade 12 student receives a 350 in Listening, it would be a 2.3.

Because the bands between cut scores on the score scale vary in width, PL scores should not be considered to form an interval scale. That is, the distance between PL scores 1.5 and 2.5 cannot be assumed to be equal to the distance between PL scores 2.5 and 3.5 . Only scale scores should be used as interval measures. PL scores are at even intervals within a grade and proficiency level (e.g., in Grade 3, the distance between 3.1 and 3.2 is the same as the distance between 3.7 and 3.8), but they do not form an interval scale across proficiency levels.

### 1.5 Test Administration

### 1.5.1 Test Administrator Training

To prepare individuals to serve as test administrators, test administrator training for ACCESS 2.0 Series 401 Paper was conducted through an online course hosted on WIDA's website. Three certifications were offered to participants: a group test administration certification pertaining to the Listening, Reading, and Writing portions of ACCESS 2.0; a certification for the Speaking test; and a certification for the Kindergarten test. In order to receive any of the three certifications, participants had to complete the relevant online course and pass a quiz after completing the course.

### 1.5.2 Test Security

Every effort is made to keep the test secure at all levels of development and administration. WIDA, CAL, and Data Recognition Corporation (DRC, the entity responsible for printing, distribution, collection, and scoring of the printed tests) follow established policies and procedures regarding the security of the test, and every individual involved in the administration of ACCESS 2.0, from the district level to the classroom level, is trained in issues of test security.

### 1.5.3 Test Accommodations

If a test taker has an Individualized Education Plan (IEP), to the extent possible, the recommendations in the student's IEP are to be followed. The extent to which this was accomplished for ACCESS 2.0 Series 401 Paper was a local decision made during administration.

Starting with the 2011-2012 testing cycle, WIDA made available the Alternate ACCESS for ELLs test (hereafter, Alternate ACCESS). Alternate ACCESS is intended only for ELLs who have cognitive disabilities ${ }^{3}$ that are so significant as to prevent meaningful participation in

[^2]ACCESS testing, even with accommodations. The results of the Alternate ACCESS operational administration will appear in a separate technical report.

### 1.6 Scoring

Test booklets are returned to DRC after testing, where they are electronically scanned in preparation for scoring. Listening, Reading, and Writing are scored by DRC. Speaking is locally scored by the test administrator. Details of the scoring methods are described below.

### 1.6.1 Listening and Reading

In the case of the Listening and Reading tests, all items are selected-response and thus are dichotomously scored as correct or incorrect. Students mark their answers directly in their test booklets, so each page is scanned into an electronic database.

### 1.6.2 Writing

Student responses to the Writing tasks are centrally scored at DRC. The ACCESS 2.0 Writing Scoring Scale is distinct from the WIDA Writing Rubric, which is a tool for evaluating student writing in classrooms and for interpreting student scores from ACCESS 2.0. The Writing Scoring Scale was designed specifically as a scoring tool only and is not appropriate for any other purposes.

The ACCESS 2.0 Writing Scoring Scale has six whole score points that range from 1 through 6. For responses that fall in between the whole score points, plus score points are available. The scale descriptors include three different yet interrelated dimensions: discourse, sentence and word/phrase. The scale descriptors guide raters as they consider all three dimensions in order to make holistic judgments about which score points best suit a response. The dimensions are distinguished as follows:

- The discourse descriptors focus on the degree of organization and the extent to which the response is tailored to the context (e.g., purpose, situation, and audience).
- The sentence descriptors describe a response in terms of the complexity and grammatical accuracy of sentence structures.
- The word/phrase descriptors specify the range and appropriateness of the original vocabulary used (i.e., text other than that copied and adapted from the stimulus and prompt).

When assigning a score, a rater needs to make an initial judgment about which whole score point ( 1 to 6 ) best describes a response and then determines whether the three descriptors for that whole score point suit for that response. If all three descriptors fit, a whole score point should be awarded. If there is clear evidence that one or two descriptors from an adjacent score point are a better fit, a plus score point is awarded. In addition to scale descriptors, scoring rules address special cases where responses are nonscorable, completely or partially off-task, and completely or partially off-topic. Both nonscorable and completely off-task responses are scored as 0 .

Completely off-topic responses receive a maximum score of $2+$. Partially off-topic responses are scored in their entirety using the Scoring Scale, while partially off-task responses are scored by ignoring the off-task portion and scoring only the on-task portion.

To calculate a raw score for the Writing test, raters' scores for each Writing task are converted to whole numbers ranging from $0-9$, as shown in Table 1.6.2A. On Tier A tests, for all grade-level clusters except for Grade 1, the scores from the three tasks are added to calculate a total raw score, which can range from 0-27. An exception to this rule is the Grade 1 Tier A test. On this form, there are four Writing tasks. The first two of these tasks use a modified version of the scoring scale and have score ranges of $0-1$ and $0-3$ respectively. The third and fourth task use the full scoring scale from $0-9$; additionally the last task is weighted as 3 . Therefore, the possible final raw scores for Grade 1 Tier A range from 0-40.

On a Tier B or Tier C test, results from the different tasks are given different weights. (Note that for ACCESS 2.0 Series 401 Paper, the Tier B Writing test is always identical to the Tier C test. The weighting rules are also identical for Tier B and Tier C tests). These weights are specified to reflect intended amounts of time that a student should spend on each task. The first task is given a weight of 1 , the second task is given a weight of 2 , and the third task is given a weight of 3 . Thus, for example, a student with raw scores of 5,6 , and 7 on the three tasks would have a total raw score of $38(1 * 5+2 * 6+3 * 7)$, while a student with raw scores of 7,6 , and 5 on the three tasks would have a total raw score of $34(1 * 7+2 * 6+3 * 5)$. Raw scores on the Tier B and Tier Ctests can range from 0-54.

Table 1.6.2A

| Rating to raw score conversion (Writing) |  |
| :--- | :--- |
| Rating | Raw Score |
| 0 | 0 |
| 1 | 1 |
| $1+$ | 2 |
| 2 | 3 |
| $2+$ | 4 |
| 3 | 5 |
| $3+$ | 6 |
| 4 | 7 |
| $4+$ | 9 |
| 5 | 9 |
| $5+$ | 9 |
| 6 |  |

### 1.6.2.1 Scoring Procedures for Writing

Writing tasks are scored by trained raters using the ACCESS 2.0 Writing Scoring Scale. According to documentation from DRC, raters are well-educated professionals, with at least a four-year college degree in a relevant field and a demonstrated writing ability. Prior to scoring any live student responses, the raters undergo thorough training and qualifying. Training is taskspecific in order to ensure that raters understand the nuances of each unique Writing task. Team

Leaders, who are selected based on prior performance as raters and for their leadership skills, are assigned to small groups of raters; there are typically ten raters on each team. The Team Leaders are responsible for monitoring the performance of their team members and providing ongoing feedback to support accurate scoring. Scoring Directors are promoted from within DRC and earn their positions by demonstrating quality work as scorers and Team Leaders on previous projects. Scoring Directors are responsible for a specific set of tasks and train and oversee the teams of scorers assigned to these tasks. What follows are general scoring procedures utilized by DRC.

## Rater Training and Qualifying

- Raters are seated at stations and are assigned unique ID numbers and passwords.
- The Scoring Director provides detailed directions for use of DRC's computerized scoring system.
- The Scoring Director trains the raters using task-specific anchor sets and training sets.
- Raters must demonstrate scoring proficiency by scoring at least $70 \%$ agreement on a qualifying set before scoring live responses.
- Once raters are qualified, they are further trained for their grade-level cluster on the specific tasks for which they will rate responses.
- Once raters have trained, qualified, and begun live scoring, DRC uses calibration sets to keep the raters calibrated on the actual tasks they are scoring.

## Routing Responses to Ensure "Blind" Second Ratings

- The DRC scoring system ensures that responses are routed to qualified raters until the prescribed number of ratings is performed for all responses.
- Raters do not know if they are the first or second rater.

## Calculating Score Agreement for Scoring Monitoring

- For monitoring and review purposes, agreement is defined as two adjacent scores. (See section 3.3.1.3 for a description of the writing scoring scale.) For example, using the writing scoring scale, a score of 2 and $2+$ would be considered agreement as would scores of 2 and 2 or scores of $2+$ and 3 . Scores of 2 and 3 on the writing scoring scale would be considered adjacent and scores of 2 and $3+$ would be considered non-adjacent.

## Monitoring Scoring (Quality Control)

- Ongoing quality control checks and procedures help monitor and maintain the quality of the scoring sessions. DRC monitors rater reliability with a $20 \%$ read-behind protocol. Read-behind data are monitored daily.
- Responses can be retrieved on-demand (e.g., specific grade-level clusters, specific students) should the need arise during or subsequent to the scoring process.
- If needed, responses can be rescored based on task- or response-level information, such as task number, date, score value assigned, or scorer ID.
- For Writing, DRC uses both re-calibration and validation sets. For each of the first five days that a rater scores a task, he or she takes one re-calibration set of five responses per task. After the raters takes a recalibration set, the Scoring Director or Team Leader reviews it using descriptors from the Writing Scoring Scale and the anchor responses to explain the rationale behind each response's score. Starting on the $6^{\text {th }}$ day of scoring, DRC uses validity sets to monitor rater performance. These are sets of items seeded into the operational sets that, on a daily basis, monitor how raters are doing when compared to the known ratings of the validity sets. The raters do not know which items are operational and which are from a validation set.

## Handling Unusual Responses

- Raters can forward responses to Team Leaders for assistance.
- Responses requiring special attention, including nonscorable responses, are routed to Scoring Directors for review and resolution.

### 1.6.3 Speaking

The Speaking test is administered individually to each test taker. The test is media delivered. Students listen to an audio recording of the test input while following along in a test booklet. For each task on the Speaking test, a model student response exemplifies the task-level expectations for students and also serves as a scoring benchmark. The test administrator monitors and scores the test. Responses are immediately scored by the administrator while the test is administered. After listening to the student's responses, the administrator assigns a score. The Speaking test is scored using a scoring scale that is designed to evaluate student responses relative to the model student's response. As part of test administration, the test administrators hear the model student response before each student response, which supports them in assigning an appropriate score relative to the model response. The possible ratings are defined as follows:

- Exemplary use of oral language to provide an elaborated response. The student's language use is comparable to or going beyond the model in sophistication.
- Strong use of oral language to provide a detailed response. The student's language use is approaching that of the model in sophistication, though not as rich.
- Adequate use of oral language to provide a satisfactory response. The student's language use is not as sophisticated as that of the model.
- Attempted use of oral language to provide a response in English. The student's language use does not support an adequate response.
- No response in English.

Operationally, a score of 4 is given for every task with a score of Exemplary, 3 for Strong, 2 for Adequate, 1 for Attempted, and 0 for No Response. The sum of those scores is the total Speaking raw score for that student.

Table 1.6.3A presents the WIDA Consortium's Speaking Scoring Scale, which summarizes the scoring criteria for each score point. These criteria are applied relative to the target proficiency level of the task (P1, P3, or P5), and the task-level expectations are embedded within the model student response. For P1 tasks, only scores of No Response (0), Attempted (1), or Adequate and above (2) are possible.

Table 1.6.3A
Speaking Scoring Scale

| ACCESS for ELLs 2.0 Speaking Scoring Scale |  |
| :--- | :--- |
| Score point | Response characteristics |
| Exemplary use of oral <br> language to provide an <br> elaborated response | - Language use comparable to or going beyond the model in sophistication <br> - <br> - Plear, automatic, and fluent delivery |
| Strong use of oral <br> language to provide a <br> detailed response | - Language use approaching that of model in sophistication, though not as rich <br> - Clear delivery <br> - Appropriate word choice |
| Adequate use of oral <br> language to provide a <br> satisfactory response | - Language use not as sophisticated as that of model <br> - Generally comprehensible use of oral language <br> - Adequate word choice |
| Attempted use of oral <br> language to provide a <br> response in English | - Language use does not support an adequate response <br> - Comprehensibility may be compromised <br> - Word choice may not be fully adequate |
| No response (in English) | - Does not respond (in English) |

To calculate a raw score for the Speaking test, the five score points are converted to whole numbers, as shown in Table 1.6.3B. To calculate a total raw score, the raw scores for each task are added together. Speaking tasks on Tier A target PL 1 and PL 3, and Speaking tasks on Tiers B and C target PL 3 and PL 5. To compute raw scores for Tiers B and C, six points are added to the total raw score, representing a score of Adequate and Above for three tasks targeting language at PL 1. Though a Tier B or C student would not have been administered any tasks targeting the PL 1 level, it is assumed that a score of Adequate and Above would be applicable to such tasks. Thus, on the tier A form, scores range from $0-18$; on the $B / C$ test, from 6-30.

Table 1.6.3B
Score point to raw score conversion (Speaking).

| Score Points | Raw Score |
| :--- | :--- |
| No Response (B, F, or I)* | 0 |
| Attempted | 1 |
| Adequate/Adequate and Above | 2 |
| Strong | 3 |
| Exemplary | 4 |
| B B Blank response; F= Foreign language response; I = Indecipherable response |  |

### 1.6.3.1 Training Procedures for Scoring Speaking

The Speaking Test is the only portion of ACCESS 2.0 that is scored locally. Test administrators must complete the relevant online ACCESS 2.0 Paper test administrator training module for the Speaking test and pass the accompanying quiz (either Grades $1-5$ or Grades 6-12). The training focuses on developing the test administrators' ability to score the test reliably. Separate training materials are available that address test administration and monitoring procedures. To reliably score the test, test administrators are then trained on the Speaking Scoring Scale (see Table 1.6.3A). Training materials are available for each grade-level cluster, and raters listen to anchor samples and view score justifications that provide detailed explanations for scores based on the scoring scale. Practice samples are also available so that raters can practice assigning scores. The course includes both required training material for each grade-level cluster as well as optional training material. Raters are required to complete training sections for each grade-level cluster they will administer and score. However, if a rater will score more than three grade-level clusters, they may complete rater training for only three. The quizzes include 12 items in which raters listen to and assign a score to a task response. The pass rate for the quiz is $80 \%$ correct.

## 2. An Assessment Use Argument for ACCESS 2.0: Focus on Assessment Records

One important factor in developing an assessment as a measurement tool is considering how to determine its validity. Validity is "the degree to which evidence and theory support the interpretations of test scores for proposed uses of tests" (American Educational Research Association, American Psychological Association, \& National Council on Measurement in Education [AERA, APA, \& NCME], 2014, p. 11). Evaluations of test validity assess the evidence that supports the interpretations and decisions made about test takers on the basis of their performance on a test, and the appropriateness and adequacy of such interpretations. A fully developed validation framework, including an Assessment Use Argument (AUA; Bachman \& Palmer, 2010), consists of several steps (described in Section 2.1 below) that connect test design and administration to intended and actual score interpretation and consequences. This chapter contextualizes the information presented in this Annual Technical Report within an argumentbased approach to addressing validity (Bachman \& Palmer, 2010; Chapelle, Enright, \& Jamieson, 2008; Kane, 2002, 2013; Mislevy, Almond, \& Lukas, 2004) for ACCESS 2.0.

An argument-based approach to the ACCESS 2.0 validation framework organizes the information in the present report to support claims about Assessment Records (i.e., test scores and proficiency level descriptions collected via ACCESS 2.0). Specifically, tables and figures from this report are explicitly linked to questions related to assessment data. Chapelle, Enright, \& Jamieson (2010) support using such a structure to present information to assessment users because, "based on an analysis of four points of comparison-framing the intended score interpretation, outlining the essential research, structuring research results into a validity argument, and challenging the validity argument-we conclude that an argument-based approach to validity introduces some new and useful concepts and practices" (p.3).

The complete validity argument that will be employed to support the use of ACCESS 2.0 will show the path from test design to test taker performance to the uses and interpretations of test scores and the subsequent consequences of test use. This framework is structured around assertions, or claims, about the assessment. The claims are presented as a series of statements that connect some aspect of the assessment process to the intended purposes of the assessment. Evidence for each claim is then organized by the action that is used to ensure each claim, and it includes results from analyses of test data, outside documentation, and other resources. In the complete validation argument, this process of identifying evidence to support claims will encompass the entire testing process, from the commencement of the test design to the consequences of test use (Bachman \& Palmer, 2010; Llosa, 2008); Figure 2A shows the process by which evidence supports validation actions, which are used to establish larger claims about ACCESS 2.0.

Figure 2A: General Argument Structure for Assessment Validation (simplified from Toulmin, 2003).

### 2.1 The Generic Validation Framework for ACCESS 2.0

The generic validation framework that will be applied to the entire ACCESS 2.0 testing process was developed at the Center for Applied Linguistics (CAL) and is hereafter referred to as CAL's Validation Framework. CAL's Validation Framework, shown in Figure 2.1A, combines models for both test development (i.e., Evidence-Centered Design [Mislevy, Almond, \& Lukas, 2004]) and assessment validation (i.e., the AUA from Bachman and Palmer [2010]) to cover the assessment development and implementation process from initial conceptualization to the score interpretations and consequences of using the assessment. This framework constantly looks both forward and backward, and each subsequent step depends upon the strength of the step below it; for this reason, the steps are numbered from seven to one. For example, during the initial Plan step, test developers state the anticipated decisions and consequences of implementing the assessment program, which are eventually investigated in Decisions, and Consequences represents the culmination of all previous steps. This structure highlights the fact that any weakness in a lower step affects the steps above it.

Figure 2.1A: CAL's Validation Framework (based on Bachman \& Palmer, 2010; Mislevy, Almond, \& Lukas, 2004).
In CAL's Validation Framework, Plan involves an examination of possible decisions that state educational agencies might make and consequences that might result from the assessment. This leads to the consideration of several models during Design, where specifications that answer such critical questions as "What are we measuring?" and "How do we measure it?" are developed (Mislevy, Almond, \& Lukas, 2004). The subsequent steps of the validation framework highlight the trialing, implementation, and use of the assessment results, beginning with test takers' performance on the assessment (Assessment Performance) and continuing through the collection of test scores (Assessment Records), interpretations of those test scores (Interpretations), decisions made based on the test scores (Decisions), and the consequences of test use (Consequences).

### 2.2 Focus on Assessment Records

Although the complete validation framework for ACCESS 2.0 contains seven steps (see Figure 2.1A), the data presented in this document cover only Assessment Records. By focusing on Assessment Records (i.e., test scores and proficiency level descriptions), the information in the Annual Technical Report will be used to support claims related to the quality and consistency of
the assessment data gathered and analyzed using ACCESS 2.0. The claims in this step of the AUA all pertain to the general question, "How do we know that the reported language domain scores and composite scores on ACCESS 2.0 are consistent and dependable?" Other questions about the development, administration, and outcomes of ACCESS 2.0 will be evaluated in a forthcoming document, currently in development by WIDA.

The diagram in Figure 2.2A shows a visual representation of an argument-based approach for supporting claims related to Assessment Records. The figure shows how Assessment Records (Step 4), will fit into the complete, generic validation framework. Evidence in the form of data from this report or other sources will be presented to support these claims as they relate to ACCESS 2.0.

Figure 2.2A: Structure of the Argument-Based Approach Supporting Assessment Records (Step 4) contained in this chapter.

### 2.2.1 Breakdown of Claims for the Assessment Records Produced in the ACCESS 2.0 Assessment Program

Assessment Records, Step 4 of the complete ACCESS 2.0 validation framework, is broken down into the following six claims:

C4.6. All test takers are provided comparable opportunities to demonstrate their English Language Proficiency.

C4.5. All tasks and items are scored consistently for all test takers.

C4.4. Test items/tasks work appropriately together to measure each test taker's English Language Proficiency.

C4.3. The same scale scores obtained by test takers in different years retain the same meaning.
C4.2. ACCESS 2.0 measures English Language Proficiency for all test takers in a fair and unbiased manner.

C4.1. Test takers are classified appropriately according to the proficiency levels defined in the WIDA English Language Development Standards.

As shown in Figure 2.2.1A, these claims depend upon each other, again moving from (C4.6) down to (C4.1). Within this organizational structure, each successive claim builds upon the previous one(s) (e.g., ratings are only useful to test developers and stakeholders if all test takers are provided comparable opportunities to demonstrate their proficiency). In the next section, these claims are broken down even further into actions that are taken to ensure the consistency and reliability of the assessment records.

Figure 2.2.1A: Progression of Claims for Step 4: Assessment Records.

### 2.3 Evidence for Assessment Records Claims of ACCESS 2.0

In this section, evidence in the form of data or other sources (e.g., test administration manuals, other information within this report, etc.) is connected to each of the Assessment Records claims via the actions taken to ensure those claims. This section denotes the sections of the report, and the tables, figures, and external sources that provide evidence related to each action. A summary table of the information presented in this section is contained in Section 2.4. Information on how to navigate the tables and figures throughout this report is presented in Section 2.5.

Because these claims relate to Assessment Records, which is Step 4 of the overall validation framework, their numbering begins with 4 . The number after the decimal denotes the level of the claim within Step 4. This numbering system is used in anticipation of the development of more complete documentation of a validity argument for ACCESS 2.0, which will be completed by WIDA. Individual actions to ensure each claim are denoted by the corresponding letter (a, b, c, and so on).

Claim 4.6 - All test takers are provided comparable opportunities to demonstrate their English Language Proficiency.

Action 4.6a: Well-specified procedures were developed for test administrators so that they are able to administer the test consistently.

Evidence: Procedures for administering the test and producing reported scores are documented in the ACCESS 2.0 Test Administrator Manual.

Action 4.6b: Test administrators document and report any irregularities that may occur so that appropriate action may be taken.
Evidence: General processes and procedures for test irregularities due to student condition, testing environment, or other unusual occurrences can be found in the District and School Test Coordinator Test Administrator Manual. Specific testing situations, including where to start and stop the test, when breaks can be taken, material management protocol in the case of damaged testing material, and other detailed guidance, can be found in the Test Administrator Manual. Both the District and School Test Coordinator Manual and the Test Administrator Manual can be found on WIDA's website. States each have a specific policy for Test Administrators to follow in the case of a testing irregularity, which can include steps such as documentation to use or notification procedures to follow. These state specific steps can be found on the ACCESS 2.0 State Checklists, found on the state pages ${ }^{1}$ and within the training course. Additionally, the ACCESS 2.0 Training Course highlights common testing irregularities and the resources to use in these circumstances.

In the case that the test administrator has additional questions about how to proceed in the event of a testing irregularity, the WIDA Client Services Center can be contacted via email at help@wida.us or toll free at 1-866-276-7735.

Action 4.6c: Procedures are in place to ensure that items and tasks do not have issues with bias or sensitivity.

Evidence: As detailed in Section 1.3.2, all test items and tasks are subject to bias and sensitivity reviews. These reviews examine items to ensure that they do not favor students from a particular SES, geographic area, educational background, or introduce other systematic biases.

## Claim 4.5 - All items and tasks are scored consistently for all test takers.

Action 4.5a: Raters of performance-based tasks undergo training so that they know how to score appropriately.
Evidence: Section 1.6 of this report specifies the scoring procedure for ACCESS 2.0. Section 1.6.2 provides information regarding rater training and qualifying protocols for the Writing domain, which is centrally scored by DRC. The Speaking test is locally scored. Section 1.6.3.1

[^3]details the training processes that should be followed by local schools and districts. Local schools and districts are responsible for ensuring that each rater is properly trained using these materials, for providing sufficient time and training to prepare raters for rating the speaking test, ensuring that that the appropriate resources needed to rate the Speaking test are provided, and for routinely monitoring the rating of speaking tests and evaluating inter-rater reliability indices.

Action 4.5b: Listening and Reading items are scanned and then scored electronically using a carefully checked key.

Evidence: Section 1.6 of this report specifies the scoring procedure for ACCESS 2.0. Listening and Reading items are dichotomous and are electronically scored by DRC (see Section 1.6.1).

Action 4.5c: Raters of performance-based tasks are certified, demonstrating that they can score appropriately.

Evidence: Section 1.6 of this report specifies the scoring procedure for ACCESS 2.0. Writing tasks are centrally scored at DRC, and all raters are pre-screened, trained, and subject to qualifying scoring tests before becoming operational raters. Once raters are qualified, they then undergo additional training on the grade-level cluster and specific tasks they will be scoring. Following this more intense training, the raters are subject to calibration sets to ensure that they are properly calibrated to the grade cluster and task(s) (see Section 1.6.2).

Speaking is scored by the local test administrator after the completion of training on test administration and on the Speaking Rubric (see Section 1.6.3).

Action 4.5d: Raters of Writing tasks are monitored daily to ensure that they are scoring appropriately.

Evidence: DRC provides raters of performance-based tasks with specially prepared calibration sets each day to ensure that the scoring rubric is being applied consistently across scoring sessions (see Section 1.6.2). For the Writing test, pre-rated and vetted validation sets are seeded into the operational items for scoring. The validation sets are utilized to ensure that raters are scoring accurately and consistently and any drift is identified and promptly corrected.

Action 4.5e: Scoring data for Writing tasks are analyzed for rater agreement to understand how closely raters agree.

Evidence: For a sample of $20 \%$ of responses to each task, interrater reliability is calculated for each of the Writing tasks (see Section 5.2.8; see Table 6F). During operational scoring, these data are monitored daily for quality control purposes.

## Claim 4.4 - Test items/tasks work appropriately together to measure each test taker's English Language Proficiency.

Action 4.4a: For each test form (e.g., Reading 6-8B), item and task analyses are performed and psychometric properties of the items and tasks are evaluated to confirm that scores are internally consistent.

Evidence: Section 5.2.8 describes the ways in which test reliability is computed for the forms. Results are presented in Table 6F.

Action 4.4b: For each domain and composite score across tiers, item and task analyses are performed and psychometric properties of the items and tasks are evaluated to confirm that scores are internally consistent.

Evidence: A single reliability estimate, a stratified Cronbach's alpha (Cronbach, Schonemann, \& McKie, 1965), is calculated across the three tiers for each domain. Cronbach's alpha indicates the extent to which items work together to measure the same construct. The stratified Cronbach's alpha is an average reliability, and it is used when test takers are administered several related subtests but are then evaluated based on a composite of those subtest scores. Table 8D presents the data used to calculate an estimate of the reliability of the composite scores using a stratified Cronbach's alpha (see also Section 7.1.1.).

Action 4.4c: Analyses of Rasch model fit statistics are conducted to show that individual tasks perform appropriately.

Evidence: The Complete Item or Task Analysis Summary table includes information on the Rasch fit statistics for each test item (see Section 5.1.1., 5.2.9, Table 6G). These statistics, called outfit mean square and infit mean square statistics, are calculated by comparing the observed empirical data with the values that the Rasch model expects test takers to produce. Infit and outfit statistics indicate any consistently unusual performance in relation to the item's difficulty measure by measuring the degree to which examinees' responses to items deviate from expected responses. Both statistics have an expected value of 1.0 . Items with infit and outfit mean square statistics between 0.5 and 1.5 are considered "productive for measurement" (Linacre, 2002). Values between 1.5 and 2.0 are "unproductive for construction of measurement, but not degrading." Values greater than 2.0 might "distort or degrade the measurement system." Values below 0.5 are "less productive for measurement, but not degrading." Infit helps ensure that test takers within a range of the targeted proficiency level perform as expected. It is not as sensitive to outliers as outfit. Outfit can be skewed if test takers with extreme (i.e., high-level or low-level) proficiency do not perform as expected. High infit is a bigger threat to validity, but is more difficult to explain than high outfit (Linacre, 2002). The infit and outfit mean square statistics are part of the evaluation criteria used to select the items and tasks that appear on the final operational forms.

Action 4.4d: Items and tasks of appropriate difficulty are chosen for each domain.
Evidence: The Complete Item or Task Analysis and Summary tables (see Section 5.2.9, Tables 6G) provide information on the difficulty of each item or task. Section 5.2.9 describes the construction of these tables. When the test is assembled, task difficulty is one of several criteria used to select appropriate items for operational assessment from the pool of field tested items.

Claim 4.3 - The same scale scores obtained by test takers in different years retain the same meaning.
Action 4.3a: A sufficient number of items and tasks are used as anchor items across adjacent years to maintain a consistent scale from year to year.
Evidence: For ACCESS 2.0 Series 401 Paper, the Listening and Reading test forms were reused forms from ACCESS Series 303. See Section 1.3.3 for further detail.

For ACCESS 2.0 Series 401 paper, in the domains of Writing and Speaking a certain percentage of items from the Series 400 test form were refreshed, and a number of tasks were retained from the previous year's assessment for the purpose of scale maintenance. Section 5.2.5. of this report describes the equating procedures used, and Table E presents item-by-item information, including information on which tasks were used as anchor tasks.

Action 4.3b: New items and tasks are calibrated with anchor items to ensure that their difficulty measures are on the same consistent scale that is used from year to year.

Evidence: For ACCESS 2.0 Series 401 Paper, year-to-year consistency with the ACCESS scale was maintained in two ways. In the domains of Listening and Reading, the Series 401 Paper tests are reused forms of the ACCESS Series 303 test.

For Writing and Speaking, Section 5.2.5. describes the equating summary included in this report, and Table E in Chapter 6 provides detailed information on which tasks were used as anchor tasks.

Action 4.3c: The same scaling equation is applied from year to year to ensure that scale scores are obtained consistently over time.
Evidence: The following scaling equations are used to convert ability measures in logits to scale scores:

- L: (Ability Measure in Logits*37.571) +316.637
- R: (Ability Measure in Logits*26.000) +323.272
- W: (Ability Measure in Logits*26.851) +303.332
- S: (Ability Measure in Logits*29.248) +265.076

For Listening and Reading, these equations have been in use from the first operational administration of ACCESS (Series 100). Evidence for scale maintenance in Listening and Reading is detailed in the ACCESS for ELLs Series 400 Listening and Reading Scale Maintenance: Technical Brief (Center for Applied Linguistics, 2016).

For Writing and Speaking, scaling equations are new for Series 401. A scaling study was conducted in summer 2016 (see Center for Applied Linguistics [2017]). The equations derived from this scaling study were used for the first time in Series 401 (2016-17 operational year). WIDA ACCESS Annual Tech Rpt 13B

Claim 4.2 - ACCESS 2.0 measures English Language Proficiency for all test takers in a fair and unbiased manner.

Action 4.2a: Differential item functioning (DIF) analyses are conducted to determine whether any items or tasks may be biased against certain subgroups.

Evidence: Results of DIF analyses are provided in Table 6H (see Section 5.2.10 for an overview of these tables). Analyses search for bias in contrasting groups based on gender (male versus female) and ethnicity (Hispanic versus non-Hispanic). Table H in Chapter 6 shows the number of items that favored one group or the other at all levels of DIF.

Action 4.2b: Items that show evidence of DIF are carefully reviewed so that any that indicate bias are not used for scoring and are removed from future test forms.

Evidence: If an item shows C-level DIF, a content review panel is convened to examine the content of the item. The panel is composed of diverse members and is chosen carefully so that panelists include male and female members as well as bilingual individuals who speak either English and Spanish or English and another language. The panel then comes to a consensus on whether or not the item content is likely to favor or disfavor specific subgroups of students.

## Claim 4.1 - Test takers are classified appropriately according to the proficiency levels defined in the WIDA English Language Development Standards.

Action 4.1a: Distributions of raw scores, scale scores, and proficiency levels for each domain are analyzed to confirm that ACCESS 2.0 effectively measures the performance of test takers across the range of English Language Proficiency levels as defined by the WIDA ELD Standards.

Evidence: The distribution of test takers' raw scores on ACCESS 2.0, organized by individual test form (e.g., Reading 3-5B), shows the extent to which ACCESS 2.0 effectively measures the performance of test takers across the range of ELD abilities that each form was designed to assess (see Section 5.2.1; see Table 6A; see Table 6B).

The distribution of test takers' scale scores on ACCESS 2.0, organized by test form (e.g., Reading 3-5B), shows that ACCESS 2.0 effectively measures the performance of test takers across the range of ELD abilities that each form was designed to assess (see Section 5.2.2; see Table 6B; see Figure 6B).

The proficiency level distribution of test takers' scores on ACCESS 2.0, organized by individual test form (e.g., Reading 3-5B), shows that ACCESS 2.0 effectively measures the performance of test takers across the range of proficiency levels that each form was designed to assess (see Section 5.2.3; see Table 6C; see Figure 6C).

The Raw Score to Proficiency Level Score table shows the interpretive proficiency level score associated with each raw score (see Section 5.2.12; see Table 6J). This distribution of scores shows that ACCESS 2.0 effectively measures the performance of test takers across the range of proficiency levels that each form was designed to assess.

The Test Characteristic Curve for each test form graphically shows the relationship between test takers' ability measure (which is calculated based on test performance using Rasch modeling) on the horizontal axis and the expected raw scores on the vertical axis (see Section 5.2.6; see Figure 6D). Five vertical lines indicate the five cut scores for the highest grade in the cluster, dividing the figure into six sections for each of the six WIDA language proficiency levels. The curve shows that higher expected raw scores are required to be placed into higher language proficiency levels.

Action 4.1b: Distributions of scale scores and proficiency levels, organized by grade-level cluster, are analyzed to confirm that ACCESS 2.0 effectively measures the performance of test takers across the range of English Language Proficiency levels as defined by the WIDA ELD Standards.

Evidence: The distribution of test takers' scale scores on ACCESS 2.0, organized by grade-level cluster, shows that ACCESS 2.0 effectively measures the performance of test takers across the range of ELD abilities as described by the WIDA ELD Standards (see Section 7.2.1; Table 8A; see Figure 8A).

The proficiency level distribution of test takers' scores on ACCESS 2.0, organized by gradelevel cluster, shows that ACCESS 2.0 effectively measures the performance of test takers across the range of proficiency levels as defined by the WIDA ELD Standards (see Section 7.2.2; see Table 8B; see Figure 8B).

The Test Characteristic Curve reflects test takers' mean raw scores by domain on ACCESS 2.0 across the entire test for Kindergarten and across the three tiers for the other grade-level clusters (see Section 7.2.4; Figure 8C). It also graphically illustrates how the tiers differ in difficulty, showing that ACCESS 2.0 effectively captures a range of ELD ability levels. Tier A is represented by a dotted curve, Tier B by a light solid curve, and Tier C by a dark solid curve. As shown, Tier B is more difficult than Tier A, and Tier C is more difficult than Tier B.

Action 4.1c: For each test form, analyses are run to confirm that English Language Proficiency is measured with high precision at the cut points pertinent to each tier.

Evidence: The Test Information Function graphically shows how well the test is measuring across the ability measure spectrum, which is calculated based on test performance using Rasch modeling (see Section 5.1.1; see Figure 6E). High values indicate more accuracy in measurement. Test forms for different tiers are designed to measure most accurately at certain proficiency levels (i.e., PL1 through PL3 for Tier A, PL2 through PL4 for Tier B, and PL3 and up for Tier C), and the expected peak of the distribution should occur within the desired range of the cut scores.

Action 4.1d: Across domains, analyses are run to confirm that English Language Proficiency is measured with high precision at the cut points pertinent to each tier.

Evidence: The conditional standard error of measurement (CSEM) at the cut point provides information on how precisely test takers' performances on ACCESS 2.0 are measured at the cut points between language proficiency levels. These cut points are critical because they are the points at which decisions are made about test taker placements. The CSEM at the cut score point tables provide information on the conditional standard error of measurement at the cut scores by grade-level cluster and domain. Because the cut points depend on the grade, information for each domain is provided for each grade within a grade-level cluster (see Section 7.2.3; see Table 8C).

From Table 8C, it is possible to examine how well the different tiers measure the English Language Proficiency of test takers at the appropriate proficiency level cut scores (i.e., PL1 through PL3 for Tier A, PL2 through PL4 for Tier B, and PL3 and up for Tier C).

The Test Information Function reflects the precision of measurement by graphically presenting the standard error of measurement across tiers for grade-level clusters (see Section 7.2.5, see Figure 8D). Tier A is represented by a dotted curve, Tier B by a light solid curve, and Tier C by a dark solid curve. As shown, Tier B is more difficult than Tier A, and Tier C is more difficult than Tier B. As in Figure C (see Section 7.2.4), the cut scores at the highest grade in each cluster are indicated by vertical lines. These lines make it easy to see that the test forms for different tiers measure most accurately at the proficiency levels they are intended to capture.
Action 4.le: Classification and accuracy analyses are conducted by grade level to confirm that proficiency level classifications are reliable for all domain and composite scores.
Evidence: Information related to the accuracy of test takers' proficiency-level classifications is presented in multiple ways (see Section 7.2.7; see Table 8E). A separate table is provided for each grade in a grade-level cluster. The table provides overall indices related to the accuracy and consistency of classification. These indices indicate the percentage of all test takers who would be classified into the same language proficiency level by both the administered test and either the true score distribution (accuracy) or a parallel test (consistency). Table 8E also shows accuracy and consistency information conditional on level and provides indices of classification accuracy and consistency at the cut points.

### 2.4 Summary of Assessment Records Claims, Actions, and Evidence

Table 2.4A
Summary of Assessment Records Claims, Actions, and Evidence

| Claim | Actions | Evidence |
| :--- | :--- | :--- |
| 6. All test takers are <br> provided comparable <br> opportunities to <br> demonstrate their <br> English Language <br> Proficiency. | a. Well-specified procedures were developed <br> for test administrators so that they are able to <br> administer the test consistently. <br> b. Test administrators document and report any <br> irregularities that may occur so that <br> appropriate action may be taken. | a. Test Administration Manual |

### 2.5 Visual Guide to Tables and Figures

This section provides a visual overview to the tables and figures contained in this report. For readers who are reviewing this report in an electronic format, section headers are built into the document structure to assist the reader to navigate through the document.

### 2.5.1 Guide to Chapter 4, Student Results

Chapter 4 has three subsections:

- 4.1 Participation
- 4.2 Scale Score Results
- 4.3 Proficiency Level Results

Section 4.1, Participation, presents distributions of students' participation by grade and gradelevel cluster. Table 2.5 .1 A provides an overview of the tables included in this section.

Table 2.5.1A
Table Numbering System for Section 4.1, Participation

### 4.1.1. Participation by Grade-level Cluster

| Table | Title |
| :--- | :--- |
| 4.1.1.1 | Participation by Grade-Level Cluster by State |
| 4.1.1.2 | Participation by Grade-Level Cluster by Gender |
| 4.1.1.3 | Participation by Grade-Level Cluster by Ethnicity |
| 4.1.2. Participation by Grade |  |
| Table | Title |
| 4.1 .2 .1 | Participation by Grade by State |
| 4.1.2.2 | Participation by Grade by Gender |
| 4.1.2.3 | Participation by Grade by Ethnicity |

### 4.1.3. Participation by Tier

| Table | Title |
| :--- | :--- |
| 4.1 .3 .1 | Participation by Grade-Level Cluster by Tier and by Domain |
| 4.1 .3 .2 | Participation by Grade by Tier and by Domain |
| 4.1 .3 .3 | Participation by Grade-Level Cluster by Tier and by Gender |
| 4.1 .3 .4 | Participation by Grade-Level Cluster by Tier and by Ethnicity |

Section 4.2, Scale Score Results, presents distributions of scale score results by grade and by grade-level cluster. These are further broken down by gender and ethnicity, and finally, correlations among scale score results are presented. Table 2.5.1.B presents the section numbering system for this section.

Table 2.5.1B
Section Numbering System for Section 4.2, Scale Score Results

| Mean Scale Scores Across Domain and Composite |  |  |
| :--- | :---: | :---: |
| 4.2.1. By Grade-level Cluster | 4.2.2. By Grade |  |
| Alone | 4.2 .1 .1 | 4.2 .2 .1 |
| And by Gender | 4.2 .1 .2 | 4.2 .2 .2 |
| And by Ethnicity | 4.2 .1 .3 | 4.2 .2 .3 |

4.2.3. Correlations Among Scale Scores by Grade-level Cluster

Section 4.3, Proficiency Level Results, presents distributions of students' proficiency level results for the four domains and four composites, by grade and by grade-level cluster. Table 2.5.1C lists the numbering system for subsections. Each subsection contains a table expressing descriptive statistics as counts (Table A) and percentages (Table B).

Table 2.5.1C
Section Numbering System for Section 4.3, Proficiency Level Results

|  |  | By Grade-Level <br> Cluster by Tier | By Grade by Tier | By Grade |
| :--- | :--- | :--- | :--- | :--- |
|  |  | For each, distributions by count and by percent |  |  |
| 4.3 .1 | Listening | 4.3 .1 .1 | 4.3 .1 .2 | 4.3 .1 .3 |
| 4.3 .2 | Reading | 4.3 .2 .1 | 4.3 .2 .2 | 4.3 .2 .3 |
| 4.3 .3 | Writing | 4.3 .3 .1 | 4.3 .3 .2 | 4.3 .3 .3 |
| 4.3 .4 | Speaking | 4.3 .4 .1 | 4.3 .4 .2 | 4.3 .4 .3 |
| 4.3 .5 | Oral Composite | 4.3 .5 .1 | 4.3 .5 .2 | 4.3 .5 .3 |
| 4.3 .6 | Literacy Composite | 4.3 .6 .1 | 4.3 .6 .2 | 4.3 .6 .3 |
| 4.3 .7 | Comprehension Composite | 4.3 .7 .1 | 4.3 .7 .2 | 4.3 .7 .3 |
| 4.3 .8 | Overall Composite | 4.3 .8 .1 | 4.3 .8 .2 | 4.3 .8 .3 |

### 2.5.2. Guide to Chapter 6, Analyses of Test Forms Results

Chapter 6 is organized by grade-level cluster. Each grade-level cluster is divided into 4 subsections, one for each domain, as follows.

Table 2.5.2A
Section Numbering System for Chapter 6, Analysis of Test Forms Results

|  | Grade-level Cluster |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Domain or Composite | $\mathbf{K}$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4 - 5}$ | $\mathbf{6 - 8}$ | $\mathbf{9 - 1 2}$ |
| Listening | 6.1 .1 | 6.2 .1 | 6.3 .1 | 6.4 .1 | 6.5 .1 | 6.6 .1 | 6.7 .1 |
| Reading | 6.1 .2 | 6.2 .2 | 6.3 .2 | 6.4 .2 | 6.5 .2 | 6.6 .2 | 6.7 .2 |
| Writing | 6.1 .3 | 6.2 .3 | 6.3 .3 | 6.4 .3 | 6.5 .3 | 6.6 .3 | 6.7 .3 |
| Speaking | 6.1 .4 | 6.2 .4 | 6.3 .4 | 6.4 .4 | 6.5 .4 | 6.6 .4 | 6.7 .4 |

The 28 subsections in Table 2.5.2A are further divided by tier. For each of the tier subsections, the following tables and figures are presented:

Table 2.5.2B
Table and Figure Numbering System for Chapter 8, Analysis Across Tiers Results

|  | Figure | Table |
| :--- | :---: | :---: |
| Raw Score Distributions | A | A |
| Scale Score Distributions | B | B |
| Proficiency Level Distributions | C | C |
| Scaling Equation |  | D |
| Equating Summary | D | E |
| Test Characteristic Curve | E | F |
| Test Information Function |  | G |
| Reliability | H |  |
| Complete Item/Task Analysis and Summary | I |  |
| DIF Analysis and Summary | J |  |
| Raw Score to Scale Score Conversion Chart |  |  |
| Raw Score to Proficiency Level Conversion Chart |  |  |

### 2.5.3 Guide to Chapter 8, Analysis Across Tiers Results

Chapter 8 is organized by grade-level cluster. Each grade-level cluster is divided into 8 subsections, one for each domain and one for each composite, as follows.

Table 2.5.3A
Section Numbering System for Chapter 8, Analysis Across Tiers Results

|  | Grade-level Cluster |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Domain or Composite | $\mathbf{K}$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4 - 5}$ | $\mathbf{6 - 8}$ | $\mathbf{9 - 1 2}$ |
| Listening | 8.1 .1 | 8.2 .1 | 8.3 .1 | 8.4 .1 | 8.5 .1 | 8.6 .1 | 8.7 .1 |
| Reading | 8.1 .2 | 8.2 .2 | 8.3 .2 | 8.4 .2 | 8.5 .2 | 8.6 .2 | 8.7 .2 |
| Writing | 8.1 .3 | 8.2 .3 | 8.3 .3 | 8.4 .3 | 8.5 .3 | 8.6 .3 | 8.7 .3 |
| Speaking | 8.1 .4 | 8.2 .4 | 8.3 .4 | 8.4 .4 | 8.5 .4 | 8.6 .4 | 8.7 .4 |
| Oral Composite | 8.1 .5 | 8.2 .5 | 8.3 .5 | 8.4 .5 | 8.5 .5 | 8.6 .5 | 8.7 .5 |
| Literacy Composite | 8.1 .6 | 8.2 .6 | 8.3 .6 | 8.4 .6 | 8.5 .6 | 8.6 .6 | 8.7 .6 |
| Comprehension Composite | 8.1 .7 | 8.2 .7 | 8.3 .7 | 8.4 .7 | 8.5 .7 | 8.6 .7 | 8.7 .7 |
| Overall Composite | 8.1 .8 | 8.2 .8 | 8.3 .8 | 8.4 .8 | 8.5 .8 | 8.6 .8 | 8.7 .8 |

For each domain and composite subsection, the following tables and figures are presented:

Table 2.5.3B
Table and Figure Numbering System for Chapter 8, Analysis Across Tiers Results

|  | Figure | Table | Applies to |
| :--- | :---: | :---: | :--- |
| Scale Score Distributions | A | A | Domains and Composites |
| Proficiency Level Distributions | B | B | Domains and Composites |
| CSEM at Cut Scores |  | C | Domains only |
| Test Characteristic Curve | C |  | Domains only |
| Test Information Function | D |  | Domains only |
| Weighted Reliability |  | D | Domains and Composites |
| Accuracy and Consistency of Classification |  | E | Domains and Composites |

## 3. Descriptions of Student Results

Chapter 3 provides a description of the tables that appear in Chapter 4. There were a total of 41 students excluded from the analyses due to mismatches in students' tiers across domains.

### 3.1 Participation

Participation in ACCESS 2.0 Paper is shown in three ways: by grade-level cluster, by grade, and by tier.

### 3.1.1 Grade-Level Cluster

Chapter 4.1.1 gives information on participation by grade-level cluster.
Table 4.1.1.1 shows participation across the 38 WIDA states that participated in the operational testing program of ACCESS 2.0 Paper in 2015-2016. The first row shows the grade-level cluster, the next 38 rows show the number of students in that grade-level cluster who took the test by state, and the final row shows the total number of participants across all 38 states.

Table 4.1.1.2 shows participation by grade-level cluster and by gender across all 38 states combined, while Table 4.1.1.3 shows participation by grade-level cluster and by ethnicity across all 38 states.

### 3.1.2 Grade

Section 4.1.2 provides similar data as the previous section, but it is broken out by grade rather than by grade-level cluster.

### 3.1.3 Tier

Section 4.1.3 gives information on participation by tier.
Table 4.1.3.1 shows this information by grade-level cluster, tier, and domain.
Table 4.1.3.2 shows the same information, but by grade rather than by grade-level cluster.
Table 4.1.3.3 shows the breakdown by grade-level cluster and tier for gender.
Table 4.1.3.4 shows the same information for ethnicity (Hispanic vs. Non-Hispanic). Consortium member states use the Census Bureau categories for student ethnicity.

### 3.2 Scale Score Results

### 3.2.1 Mean Scale Scores Across Domain and Composite Scores Section

Chapter 4.2.1 shows mean (average) scale scores by grade-level cluster across the eight scores awarded on ACCESS, first for the four domains (Listening, Speaking, Reading, and Writing) and then for the four composites (Oral Language, Literacy, Comprehension, and Overall). In this section, under each average, the number of students in each group is also given.

Table 4.2.1.1 shows mean scale scores by grade-level cluster, while Table 4.2.1.2 shows the same information broken down by gender, and Table 4.2.1.3 shows the same information broken down by race and ethnicity. In 2010, the Census Bureau introduced a new approach to reporting race and ethnicity. Previously, race and ethnicity had been a single category with six values (Hispanic, Asian/Pacific Islander/Hawaiian, Black/African American, American Indian/Alaskan Native, White-Non Hispanic, and Multi-racial/Other). Under the new approach, ethnicity has become a binary category (Hispanic or Non-Hispanic), with five categories for race (American Indian/Alaskan Native, Asian, Black/African American, Pacific Islander/Hawaiian, and White) that are not mutually exclusive. Thus, for example, Student A may be labeled as Hispanic for ethnicity and Asian for race, while Student B may be labeled as Non-Hispanic for ethnicity and both American Indian/Alaskan Native and Black/African American for race. Starting with Series 202, students who are labeled as Hispanic are included in the Hispanic (Of Any Race) category, regardless of how many racial categories they are included in. Students who are identified as one of the racial categories (e.g., Asian) and have not been identified as Hispanic are identified in only one racial category; if they are identified in more than one racial category, and have not been identified as Hispanic, then they are labeled Non-Hispanic Multi-racial.

Section 4.2.2 shows the mean scale scores broken down by grade rather than by grade-level cluster. Table 4.2.2.1 shows mean scale scores by grade, while Table 4.2.2.2 shows the same information broken down by gender, and Table 4.2.2.3 shows the same information broken down by ethnicity and race.

### 3.2.2 Correlations

Tables 4.2.3A through 4.2.3G show correlations among the four domain scale scores by gradelevel clusters across all tiers, as well as the number of students included in each correlation. Table 4.2.3A shows the results for Kindergarten, Table 4.2.3B shows the results for grade-level cluster 1, Table 4.2.3C shows the results for grade-level cluster 2, Table 4.2.3D shows the results for grade-level cluster 3, Table 4.2.3E shows the results for grade-level cluster 4-5, Table 4.2.3F shows the results for grade-level cluster 6-8, and Table 4.2.3G shows the results for grade-level cluster 9-12. Beginning with Series 101, caps were placed on students taking Tier A and Tier B test forms in Listening and Reading. This capping of scores may raise the correlation between those two scores, while decreasing the correlation of those two scores with Speaking and Writing. Note that all correlations in Tables 4.2.3A through 4.2.3G are significant at the 0.01 level (2-tailed).

### 3.3 Proficiency Level Results

Proficiency level results show the distribution of students falling into the six language proficiency levels outlined by the WIDA ELD Standards. The results are presented in eight subsections by count and percentage:

Table 4.3.1 Listening

Table 4.3.2 Reading
Table 4.3.3 Writing
Table 4.3.4 Speaking
Table 4.3.5 Oral Language Composite
Table 4.3.6 Literacy Composite
Table 4.3.7 Comprehension Composite
Table 4.3.8 Overall Composite
Within each section, results are first presented by grade-level cluster and tier in Section 4.3.*. 1 (note that * indicates a subsection variable). Tables 4.3.*.1A shows the number of students who were classified into each language proficiency level, while Table 4.3.*.1B shows the percentage of students (within each row) classified into each language proficiency category. These tables clearly show the effect of the capping of scores on Tier A and Tier B for Listening and Reading. Following the presentation by tier and cluster, results are presented by grade and tier in Section 4.3.*.2. Again, the first table in this section shows the number of students classified into each language proficiency level, while the second table shows the results in terms of percentages within each row.

Finally, in Section 4.3.*.3, results are presented by grade alone, that is, without the tiers. Again, the first table shows the number of students classified into each language proficiency level, while the second table shows the results in terms of percentages within each row.

## 4 Student Results

### 4.1 Participation

### 4.1.1 Participation by Grade-Level Cluster

### 4.1.1.1 By State

Table 4.1.1.1
Participation by Cluster by State S401 Paper

| State | Cluster |  |  |  |  |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^0]:    ${ }^{1}$ The ELD Standards, the MPIs, and sample items are available at the WIDA website, www.wida.us.

[^1]:    ${ }^{2}$ Students with very low ability levels in the Listening and Reading domains are routed to the pre-A tier for Speaking on the Online test. The purpose of the pre-A tier is to reduce the affective impact of the test on these students. As the Paper test is not adaptive, there is no way to route these students to pre-A for Paper.

[^2]:    ${ }^{3}$ Recommendations regarding physical disabilities, such as deafness or blindness, are available on the WIDA website, www.wida.us.

[^3]:    ${ }^{1}$ WIDA state pages can be found at: https://www.wida.us/membership/states/index.aspx WIDA ACCESS Annual Tech Rpt 13B
