# Math Essential Elements - 6 ${ }^{\text {th }}$ Grade Curriculum Map by Quarter 

|  | I Can Statements | Standards-Based Essential Elements | Activities/Formative Assessments |
| :---: | :---: | :---: | :---: |
|  | I can compare relationships between two-unit fractions. | EE.6.NS.1- Compare the relationships between two-unit fractions. | -Use fractions to compare with visual fraction bars, fractions with shapes, or create your own visual fraction models for students to compare. |
|  | I can use fair share and equal shares to divide. | EE.6.NS.2- Apply the concept of fair share and equal shares to divide. | -Use white boards and manipulatives for students to use fair share to divide the quotient into the circles. |
|  | I can use manipulatives or a calculator to solve two-factor multiplication problems with products up to 50. | EE.6.NS.3- Solve two-factor multiplication problems using products up to 50 using concrete objects and/or a calculator. | -Provide age-appropriate manipulatives for students to use and a calculator; Create an anchor chart for each step. |
|  | I can label equivalent number sentences. | EE.6.EE.1-2- Identify equivalent number sentences. | -Provide equivalent labels for students to identify equivalent number sentences. |
|  | I can apply properties of addition to identify equal numerical expressions. | EE.6.EE.3- Apply the properties of addition to identify equivalent numerical expressions. | -Create an anchor chart to show students the commutative and associative properties for students to refer to when creating or sorting equivalent expressions. |
|  | I can match an equation to a real-world problem that has variables to represent numbers. | EE.6.EE.5-7- Match an equation to a real-world problem in which variables are used to represent numbers. | -Have real world problems set up and students can do a math hunt around the room to match the premade equations. |

|  | I can use unit squares to solve real-world mathematical problems about area. | EE.6.G.1- Solve real-world and mathematical problems about area using unit squares. | -Have students make their own square or rectangle to trade with other students to solve for the area; provide unit squares (square manipulatives). |
| :---: | :---: | :---: | :---: |
|  | I can use unit cubes to solve real-world mathematical problems about volume. | EE.6.G.2- Solve real-world and mathematical problems about volume using unit cubes. | -Provide students with rectangular prisms to fill with unit cubes to measure volume (use online tools if needed to measure volume). |
|  | I can display data on a graph or table to show the variability in data. | EE.6.SP.1-2- Display data on a graph or table that shows variability in the data. | -Collect data and students can make their own graph (may need a template) to share the variability; students can compare their graphs. |
|  | I can summarize data distributions shown in graphs or tables. | EE.6.SP.5- Summarize data distributions shown in graphs or tables. | -Use an anchor chart for summarizing data using terms: peaks, outliers, symmetric distribution so students can see the different graphs/tables; provide students with examples and have then sort to the vocabulary terms. |
|  | I can show a simple ratio relationship. | EE.6.RP.1- Demonstrate a simple ratio relationship. | -Give students shape manipulatives or paper to make shapes to cut for ratio; have shapes pre-cut to have students match the fraction and ratio. |
|  | I can describe that positive and negative numbers are used together to show quantities that have opposite directions or values. | EE.6.NS.5-8- Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero). | -Use positive and negative numbers to talk about temperature in different parts of the world (during different seasons), you could discuss elevation or money. |

|  | I can compare relationships between two-unit fractions. | EE.6.NS.1- Compare the relationships between two-unit fractions. | -Use fractions to compare with visual fraction bars, fractions with shapes, or create your own visual fraction models for students to compare. |
| :---: | :---: | :---: | :---: |
|  | I can use fair share and equal shares to divide. | EE.6.NS.2- Apply the concept of fair share and equal shares to divide. | -Use white boards and manipulatives for students to use fair share to divide the quotient into the circles. |
|  | I can use manipulatives or a calculator to solve two-factor multiplication problems with products up to 50 . | EE.6.NS.3- Solve two-factor multiplication problems using products up to 50 using concrete objects and/or a calculator. | -Provide age-appropriate manipulatives for students to use and a calculator; Create an anchor chart for each step. |
|  | I can label equivalent number sentences. | EE.6.EE.1-2- Identify equivalent number sentences. | -Provide equivalent labels for students to identify equivalent number sentences. |
|  | I can apply properties of addition to identify equal numerical expressions. | EE.6.EE.3- Apply the properties of addition to identify equivalent numerical expressions. | -Create an anchor chart to show students the commutative and associative properties for students to refer to when creating or sorting equivalent expressions. |
|  | I can match an equation to a real-world problem that has variables to represent numbers. | EE.6.EE.5-7- Match an equation to a real-world problem in which variables are used to represent numbers. | -Have real world problems set up and students can do a math hunt around the room to match the premade equations. |

|  | I can use unit squares to solve real-world mathematical problems about area. | EE.6.G.1- Solve real-world and mathematical problems about area using unit squares. | -Have students make their own square or rectangle to trade with other students to solve for the area; provide unit squares (square manipulatives). |
