Mathematics of Finance is a course approved by the Oklahoma State Board of Education as a mathematics course with content and/or rigor equal to or above Algebra I. As such, it qualifies as a course for meeting Oklahoma's graduation requirement in mathematics as specified in 70 O.S. § 11-103.6. The course was originally designed by and this publication was adapted with permission from Moore Public Schools.

In Mathematics of Finance, visual and physical models, calculators and other technologies are recommended to enhance both instruction and assessment. Graphing calculators and computer simulations and programs may be used to analyze and display data. By using models and technologies, students will formulate and answer questions and make valid inferences and decisions based on data shown in graphs, tables, and charts.

<tbody>
<tr>
<td><strong>I. Personal Earning Power</strong></td>
<td>The student will:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>A. Use rates to categorize and compute components of income.</td>
<td>PASS* (Revised 2002)</td>
</tr>
<tr>
<td></td>
<td>B. Compute and compare earnings based on regular time, overtime, tips, etc., by solving, graphing, and analyzing linear equations.</td>
<td>Algebra I</td>
</tr>
<tr>
<td></td>
<td>C. Use the graphing calculator to analyze the difference between compensation methods (i.e., hourly versus salaried).</td>
<td>2.6a</td>
</tr>
<tr>
<td></td>
<td>D. Compute commissions based on straight commission and item rate using literal equations.</td>
<td>2.7</td>
</tr>
<tr>
<td></td>
<td>E. Use appropriate percentages to calculate deductions from wages (Social Security/FICA, etc.).</td>
<td>2.8b</td>
</tr>

### II. Financial Management

The student will:

A. Explore types of checking accounts at different financial institutions, estimating check charges or amount earned on average balances (use systems of equations to compare financial benefits).

B. Define credit and list the advantages and disadvantages of using credit rather than cash.

C. Use various mathematical models in analyzing advantages and disadvantages in retail purchasing.

D. Use the rules of exponents to determine repayment amount paid on a loan by using:

\[ A = \frac{m(1-(1+r)^q)}{r} \]

E. Create an amortization schedule for a loan by using iterations, Internet, calculator, or spreadsheets to demonstrate changes in loan payoffs by changing monthly payments, interest rate, or years.

F. Use exponential and logarithmic models to determine consequences of credit limits and interest charges.

G. Use formulas to calculate information and payment penalties on credit card accounts:

1. Average daily balances
   \[ b = \frac{\sum \text{daily balances}}{\text{Total days}} \]

2. Effective interest rate
   \[ i_{\text{eff}} = (1 + i/12)^{12} - 1 \]

3. Payoff time
   \[ n = \frac{\log (M/(M-pr))}{\log (1 + r)} \]

4. Monthly payment
   \[ M = \frac{Pr(1+r)^n}{(1+r)^n - 1} \]

* Oklahoma's Priority Academic Student Skills (PASS), revised 2002

### Algebra I

- 1.2a
- 2.7
- 2.8b

### Algebra II

- 2.2
- 2.10
### III. Federal Income Tax
The student will be able to compute Federal Income Tax using compound inequalities and optimization methods

- **B.** Calculate various itemized deductions.
- **C.** Explore Federal Withholding Tax as a piecewise linear function.

### IV. Financial Transactions
The student will investigate the financial aspects of making major purchases (i.e., automobiles, homes), using linear functions and direct variation to make decisions in budgeting

- **A.** Calculate markup and total loan amount of a car purchase by using the formula:
  \[ P = M\left[\frac{(1+r)^n - 1}{r(1+r)}\right] \]
  Students can find new car data from various Internet sites (i.e., Edmonds, NADA, Kelly Blue Book).
- **B.** Calculate the cost of operating a car
  1. Fuel usage and maintenance
  2. Linear vs. exponential depreciation
  3. Insurance cost based on rate factors
  4. Ownership vs. leasing.
- **C.** Examine the variables in buying, owning, and selling a house
  1. Renting vs. owning
  2. Qualifying for a loan
  3. Types of homes
  4. Monthly payment
  \[ P = \frac{Pr(1+r)^n}{(1+r)^n - 1} \]
  5. Operating and maintenance costs
  6. Tax considerations.
